

Fire Department Key Boxes

The time it takes for firefighters to gain access to a locked building or secured area could mean the difference between a small fire and a major disaster. With structural fire alarms and medical alert alarms, it's often necessary to resort to physical force to enter a building.

Within the FRFR response area, every commercial building with a monitored fire alarm system is required to install an approved Knox Box to allow for fire department access to the building, for the purpose of investigating the source of an alarm activation.

1. The applicant may log onto www.knoxbox.com to order the appropriate Knox Box item for the business.
2. Be sure to select Front Range Fire Rescue as the fire department jurisdiction.
3. The available boxes, padlocks and switches are included in the order form.
4. The applicant shall contact the FRFR Life Safety Division for appropriate installation location for the Knox Box. In general, the top of the installed Knox Box shall be no higher than six (6) above the finished grade.
5. The general contractor shall complete the installation of the Knox Box in the approved location, following the installation instructions that are provided with the Knox Box.
