Installation Details................................................................................................................................................................... 33
This section is to serve as a guide regarding the design and installation of WeatherBond’s Fully Adhered and Mechanically Attached EPDM Roofing Systems. Additional information essential for the design and installation of the roof system mentioned herein are also included in the Design Reference Section and also listed in the form of a Specification Supplement.

PART I – GENERAL

1.01 Description

A. The Fully Adhered Roofing System incorporates WeatherBond RBR (black or white) non-reinforced EPDM or WeatherBond RBR Black Reinforced EPDM membrane. An acceptable insulation is mechanically attached to the roof deck or Fully Adhered with WeatherBond supplied urethane-based insulation adhesive or hot asphalt and the EPDM membrane is Fully Adhered to the insulation with WeatherBond’s EPDM Bonding Adhesive (WeatherBond’s LC-60 Bonding Adhesive, Low-VOC Bonding Adhesive or WeatherBond Water Based Adhesive). Adjoining sheets of EPDM membrane are spliced together using 3” or 6” wide P&S Seam Tape and Primer or factory-applied P&S Seam Tape (WeatherBond RBR EPDM w/ Pre-applied Seam Tape) and Primer. There are no maximum slope restrictions for the application of this roofing system.

Note: When non-reinforced EPDM membrane is used, WeatherBond recommends a minimum of 60-mil thick material. WeatherBond RBR 45-mil non-reinforced EPDM may be utilized when specified or required by the owner or owner’s representative.

B. The Mechanically Attached Roofing System incorporates reinforced EPDM membrane. An acceptable insulation is Mechanically Attached to the roof deck and, depending on project criteria; the reinforced membrane is Mechanically Attached with the appropriate WeatherBond Fastener and 2” or 2-3/8” diameter Fastening Plates (Polymer Plates required over steel deck) or Fastening Bars at 6” minimum to 12” maximum along the center of the membrane splice.

Adjoining sheets of EPDM membrane are spliced together using factory-applied P&S Seam Tape and Primer or P&S Seam Tape and Primer. Field membrane sheets are either 8’ or 10’ wide depending upon wind load requirements, building height and type of roof deck. At the roof perimeter, a heavier fastening density is required utilizing 4-1/2’ wide sheets or 9” wide Peel & Stick RPS (Reinforced Perimeter Strip). The maximum roof slope for this roofing system is 18’ in one horizontal foot.

1.02 General Design Considerations

A. Petroleum based products; certain chemicals and waste products (i.e., grease, oil, animal fats, etc.) are not compatible with these roofing systems.

B. It is the responsibility of the building owner to review local, state and regional codes to determine their impact on the specified WeatherBond Roofing System.

C. It is the responsibility of the building owner or his/her designated representative to verify structural load limitation.

D. Coordination between various trades is essential to avoid unnecessary rooftop traffic over completed sections of the roof and to prevent subsequent damage to the membrane roofing system.

E. Concentrated loads from rooftop equipment may cause deformation of insulation/underlayment and possible damage to the membrane if proper protection is not provided. A protection course or sleepers must be specified.
F. The WeatherBond RBR White (white-on-black) EPDM membrane meets the ENERGY STAR® Roofing Products program guidelines for energy efficiency. Energy savings is climate specific and may vary significantly from building to building and geographic location. The greatest savings will occur in buildings located in hot, sunny climates that have a large roof surface to building volume ratio, and lower levels of insulation with lesser thermal resistance.

For specifics on savings obtainable from installing an ENERGY STAR Roofing Product, contact WeatherBond, one of WeatherBond's Representatives or call 1-888-STAR-YES (1-888-782-7937).

G. Drainage

1. Drainage must be evaluated by the Specifier in accordance with all applicable codes. Slope may be provided by tapering the structure or through the use of tapered insulation; a sufficient number of roof drains should also be specified and properly located to allow for positive drainage. Significant ponding that could remain after 48 hours should be eliminated with the addition of auxiliary drains in low areas where ponding is anticipated.

WeatherBond specifically disclaims responsibility for the design and selection of an adequate drainage system and drain accessories. Selection must be made by the building owner or the owner's design professional.

2. Small incidental areas of ponded water will not impact the performance of this roofing system; however in accordance with industry standards, the roofing assembly should be designed to prevent ponding of water on the roof for prolonged periods (longer than 48 hours). Good roofing practice dictates proper drainage to prevent possible excessive live loads and, in the event of a roof leak, to minimize potential interior damage to the roofing assembly and to the interior of the building.

3. Tapered edge strips, crickets or saddles are recommended where periodic ponding of water may occur. When the slope of the taper exceeds 2” to one horizontal foot additional membrane securement at the base of the tapered edge strip, cricket or saddle will be required.

4. On WeatherBond RBR White EPDM Fully Adhered Roofing Systems, a slope greater than 1/8” per horizontal foot is recommended to serve the long-term aesthetics.

H. On new construction projects, especially in cold climate regions, moisture generated due to the construction process could adversely impact various components within the roofing assembly if not addressed.

I. On structural concrete decks, when a vapor retarder is not used, gaps in the deck along the perimeter and around penetrations must be sealed along with vertical joints between tilt-up panels, if present, to prevent infiltration of hot humid air and possible moisture contamination resulting from condensation. This is specifically important when adhesive is used to attach the roof insulation.

NOTE: If left unaddressed, collected moisture could weaken insulation boards and facers resulting in a blow-off or increase the probability of mold growth.

J. Retrofit- Recover Projects (when the existing roofing material is left in place)

1. The removal of existing wet insulation and membrane must be specified. The Specifier shall select an appropriate and compatible material as filler for voids created by removal of old insulation or membrane.

2. A core cut should be taken to verify weight of existing components when the roofing system is to be specified over an existing roofing assembly.

3. Entrapment of water between the old and new membrane can damage and deteriorate new insulation/underlayment between the two membranes. If a vapor retarder or air barrier is not specified, WeatherBond recommends the existing membrane be perforated to avoid potential moisture accumulation and to allow the detection of moisture to enable the building owner to take corrective action. This can be accomplished by drilling approximately ¾” diameter holes every 100 square feet in the existing built-up roof or single-ply membrane (excluding PVC membrane).

4. Existing PVC membrane may be totally removed or the existing membrane must be cut into maximum 10’ by 10’ sections. All PVC flashings at the perimeter, roof drains and roof penetrations must be removed.

1.03 Quality Assurance

Building codes are above and beyond the intended purpose of this specification. The respective owner or specifier should consult local codes for applicable requirements and limitations. It is the responsibility of the
specifier to review local, state and regional codes to determine their impact on the specified WeatherBond Roofing System.

A. WeatherBond recommends the use of WeatherBond supplied products for use with WeatherBond Roofing Systems. The performance or integrity of products by others is not the responsibility of WeatherBond.

1.04 System Recommendations

A. See Tables Below for recommendations regarding Warranted Systems and Design Criteria:

1. **TABLE I – Mechanically Attached Roofing Systems – Membrane Fastening Criteria – Steel/Concrete Decks** Identifies fastening density, field membrane width and number perimeter sheets recommended for various wind zones.

2. **TABLE II – Mechanically Attached Roofing Systems – Membrane Fastening Criteria – Wood Decks** Identifies fastening density, field membrane width and number perimeter sheets recommended for various wind zones.

3. **TABLE III – Re-roofing Substrate Criteria** Identifies recommended substrates for re-roofing applications for Fully Adhered and Mechanically Attached roofing systems.

4. **TABLE IV – Fully Adhered Roofing Systems – Underlayment and Fastening Density for Assemblies** Identifies recommended underlayment for Fully Adhered roofing systems based on various wind speed coverage available. The Table also identifies fastening density of adhesive bead spacing and required edge terminations.

<td>8</td>
<td>12&quot; (2)(3)</td>
</tr>
</tbody>
</table>

(1) For Building heights between 51-100’, enhance 12'-wide perimeter with 50% more fasteners and plates.
(2) Gravel Surface BUR - Field @ 6” O.C. / Perimeter @ 4” O.C.
(3) Steel Decks - Field & Perimeter @ 6” O.C.

Additional Design Considerations

1 – Refer to Tables I & II paragraph 1.05 for recommended membrane thickness
2 - Building height should not exceed 100’*
3 - Local Wind Zone per ASCE 7 shall not exceed 130 mph*
4 - Acceptable decking: 22-gauge or heavier steel, structural concrete, 1-1/2” wood plank, or 3/4” plywood.
5 - All "T-joints" must be overlaid with appropriate flashing material. Refer to splicing and flashing details for specific requirement.

B. The formation or presence of mold or fungi in a building is dependent upon a broad range of factors including, but not limited to, the presence of spores and nutrient sources, moisture, temperatures, climatic conditions, relative humidity, and heating/ventilating systems and their maintenance and operating capabilities. These factors are beyond the control of WeatherBond and WeatherBond shall not be responsible for any claims, repairs, restoration or damages relating to the presence of any irritants, contaminants, vapors, fumes, molds, fungi, bacteria, spores, mycotoxins, or the like in any building or in the air, land, or water serving the building.

1.05 Product Delivery, Storage and Handling

A. Deliver materials to the job site in original, unopened containers.
B. When loading materials onto the roof, the Roofing Contractor must comply with the requirements of the specifier/owner to prevent overloading and possible disturbance to the building structure.
C. Job site storage temperatures in excess of 90° F (32° C) may affect shelf life of curable materials (i.e., uncured flashing, adhesives, sealants, primers, P&S Seam Tape and Peel & Stick Flashing/Accessories).
D. When the temperature is expected to fall below 40°F (5°C), outside storage boxes should be provided on the roof for temporary storage of liquid adhesives, sealants, primers, Peel & Stick Seam Tape and Peel & Stick Flashing/accessories. Containers must be rotated to maintain their temperature above 40° F (5°C).

NOTE: Prolonged exposure of Peel & Stick flashing and P&S Seam Tape to temperatures below 40°F (5°C) will cause the pre-applied adhesive tape to lose tack and in extreme cases, not bond to the substrate. Refer
to Spec Supplement E-02-11 “EPDM Membrane Splicing and Slice Repairs” for application procedures in colder temperatures.

E. Do not store adhesive containers with opened lids due to the loss of solvent, which will occur from flash off.

F. Insulation/underlayment must be stored so it is kept dry and is protected from the elements. Store insulation on a skid and completely cover with a breathable material such as a tarp or canvas. If the insulation is lightweight, it should be weighted to prevent possible wind damage.

Part II- Products

2.01 Membrane

A. WeatherBond RBR (Black and White) Non-Reinforced EPDM Membranes

1. Cured non-reinforced EPDM (Ethylene, Propylene, Diene Terpolymer) compounded elastomer. WeatherBond RBR 45- (Black Membrane Only), 60-, or 90-mil thick Non-Reinforced EPDM membrane is available in Black or White. WeatherBond RBR White membranes are installed with the white surface facing up. WeatherBond RBR membrane with thickness up to 60-mil can be available in widths up to 50’ and lengths up to 150’ (200’ for 45-mil membrane only). WeatherBond RBR White membrane with thickness of 60-mil is available up to 30’ widths and lengths up to 150’ long. WeatherBond RBR Black/WeatherBond RBR White 90-mil membranes are available in widths up to 10’ and lengths up to 100’. Membrane conforms to ASTM D4637, Type I (non-reinforced).

2. WeatherBond RBR Clean (black) EPDM Membrane (mica dust has been removed during manufacturing) is available for sheets maximum 10’ wide.

3. Refer to the physical properties listed on the following pages

B. WeatherBond RBR Reinforced EPDM Membranes

1. Cured reinforced EPDM (Ethylene, Propylene, Diene Terpolymer) compounded elastomer. WeatherBond RBR Reinforced EPDM Membrane is available only in black.

45-, 60- or 75-mil thick WeatherBond RBR Reinforced EPDM Membrane is available in sizes referenced in Table below. Reinforced membrane with polyester fabric conforms to ASTM D4637, Type II (reinforced). All sheets referenced in table are available with 3” or 6” factory applied P&S Seam Tape.

<table>

*Contact WeatherBond for other custom sizes available.

2. Refer to the physical properties listed on the following pages

WEATHERBOND RBR 45-, 60-, AND 90-MIL THICK NON-REINFORCED EPDM MEMBRANE

NOTE: Although 60-mil Non-Reinforced EPDM is recommended for Adhered Roofing Systems, 45-mil thick FR Non-Reinforced EPDM may be utilized, if specified.

* Not a Quality Control Test due to the time required for the test or the complexity of the test. However, all tests are run on a statistical basis to ensure overall long-term performance of the sheeting.

** Specimens to be prepared from coating rubber compound, vulcanized in a similar method to the reinforced product.
2.02 Insulations/Underlayments

A. General

1. Roof insulation thickness must be determined by the thermal value required for each project and may be subject to code approval limitations. On projects where a vapor retarder is used, the specifier must calculate insulation thickness to ensure the temperature at the vapor retarder will not fall below the calculated dew point.

2. Multiple layers of insulation are recommended with all joints staggered between layers.

3. For minimum recommended R-Values, Previously published by American Society of Heating and Air-Conditioning Engineers (ASHRAE), consult local building code official for applicable requirements.

4. For insulation fastening pattern and densities refer to WeatherBond Applicable Details and Design Reference DR-05-11 “Insulation Fastening Patterns”.

5. Any of the WeatherBond insulation/underlayment may be specified subject to design restrictions included with each table.

### Design Restrictions

- Higher wind speed may require the use of a cover board over Polyiso Insulation, refer to Tables in Paragraph 1.04 for applicable recommendations.
- Maximum Flute Spanability shall be limited to 2-5/8" when 1" Minimum Polyiso Insulation is to be used.
- Minimum thickness of insulation board may be restricted by wind speed coverage, refer to Tables V and VI in Paragraph 1.05.
- *1.5" minimum for adhered systems. 1" minimum for mechanically fastened systems or as a base layer for adhered.

Notes: N/A = Not Acceptable ✓ = Acceptable

XFP HD is listed in Paragraph C4 below.

2. **WeatherBond XP Polyiso** – A foam core insulation board covered on both sides with a medium weight fiber-reinforced felt facer meeting, ASTM C 1289-06, Type II, Class 1, Grade 2 (20 psi) or Grade 3 (25 psi). The product is available in 4’ x 8’ standard size with a thickness from 1 to 4 inches. 4’ x 4’ tapered panels are also available.

3. **WeatherBond XFP Polyisocyanurate**- A foam core insulation board covered on both sides with a coated glass fiber mat facer meeting ASTM C 1289-06, Type II, Class 2 (20 psi) or Grade 3 (25 psi). The product is available in 4’ x 8’ standard size with a thickness from 1 to 4 inches. 4’ x 4’ tapered panels are also available.

4. **WeatherBond XFP HD Composite** – Composite insulation panel comprised of ½ inch high-density Polyiso cover board laminated during the manufacturing process to XFP rigid Polyiso roof insulation meeting ASTM C1289 Type II, Class 2, Grade 2 (20 psi) or Grade 3 (25 psi). Available in 4’ x 8’ boards with a thickness from 2” to 4.5”. 4’ x 4’ panels are also available.

5. **WeatherBond XP-NB Polyiso** – XP Polyiso insulation bonded on the bottom side with a medium weight fiber reinforced felt facer and laminated with a top surface of 7/16” or 5/8” thick Oriented Strand Board (OSB) meeting ASTM C 1289-06, Type II, Class 1, Grade 2 (20 psi) or Grade 3 (25 psi). Available in 4’ x 8’ boards with a thickness from 1-1/2” to 4”.

### Design Restrictions

- Local Codes must be consulted regarding the acceptance of expanded insulation directly over steel decks. When specified, minimum thickness shall be designated by the manufacturer.
- Expanded polystyrene roof insulations cannot be installed directly over coal-tar pitch roof surfaces or existing PVC membranes. A separation layer of minimum 1/2" XFP HD, Recovery Board or Polyiso Insulation shall be used.
- 

Notes:  
N/A = Not Acceptable  
√ = Acceptable

**R-Tech Fanfold Recover Board** is listed in Paragraph C4 below.

2. **InsulFoam I (EPS: Expanded Polystyrene)**- A closed-cell lightweight expanded polystyrene (EPS) that meets ASTM C578, Type I. Nominal density of 1.0 lbs/cubic ft. (pcf) available in 4’ x 4’ or 4’ x 8’ sizes with thickness from 1/4” to 40”. Custom lengths, widths and tapered boards are available. May be specified beneath WeatherBond Recovery Board, Dens-Deck Prime or Securock.

3. **InsulFoam VIII (EPS: Expanded Polystyrene)** – A closed-cell lightweight expanded polystyrene (EPS) that meets ASTM C578, Type VIII. Nominal density of 1.25 lbs/cubic ft. (pcf) available in 4’ x 4’ or 4’ x 8’ sizes with thickness from 1/4” to 40”. Custom lengths, widths and tapered boards are available. May be specified beneath Recovery Board, Dens-Deck Prime or Securock.

4. **InsulFoam II (EPS: Expanded Polystyrene)** – A closed-cell lightweight expanded polystyrene (EPS) that meets ASTM C578, Type II. Nominal density of 1.5 lbs/cubic ft. (pcf) available. May be specified beneath Recovery Board, Dens-Deck Prime or Securock.

5. **InsulFoam IX (EPS: Expanded Polystyrene)** – A closed-cell lightweight expanded polystyrene (EPS) that meets ASTM C578, Type IX, Nominal density of 2.0 lbs/cubic ft. (pcf) available in 4’ x 4’ or 4’ x 8’ sizes with thickness from 1/4” to 40”. Custom lengths, widths and tapered boards are available. May be specified beneath Recovery Board, Dens-Deck Prime or Securock.

6. **InsulFoam HD Composite**- InsulFoam expanded polystyrene (EPS) insulation laminated with a top surface of 1/2” thick XFP HD. Available in 4’ x 8’ boards with thickness from 1-1/2” to 7”.

7. **InsulLam** – InsulFoam expanded polystyrene (EPS) insulation laminated with a top surface of 7/16” or 5/8” thick Oriented Strand Board (OSB), 1/2” Securock, or 1/2” Recovery Board. Available in 4’ x 8’ boards with thickness from 1-1/2” to 7”.

8. **InsulFoam SP** – A closed-cell lightweight expanded polystyrene (EPS) with a factory-laminated fiber glass facer. Nominal density of 1.25 lbs/cubic ft. (pcf), and meets ASTM C578, Type VIII. Designed for low-sloped roof applications that employ mechanically attached membranes.
D. **XPS: Extruded Polystyrene** – Dimensionally stable with high thermal and low water absorption performance capability. XPS is available in varying compressive strengths, thicknesses, and sizes. Refer to specific Technical Data Bulletins for physical properties and additional technical information.

**Design Restrictions**

- Recovery Board and R-Tech Fanfold not recommended for direct use over Type B and F steel decks.
- XFP HD not recommended for direct use over steel decks in lieu of thermal barrier. Fire testing standards yet to be established.
- Securock Cover Board, Recovery Board, Dens Deck Prime or Dens Deck may not be used directly over New or Existing Lightweight Insulating Concrete Decks existing or Structural Concrete.
- Dens Deck and Dens Deck Prime are not recommended for use directly over existing roofing membrane
- R-Tech Fanfold primarily for use in existing roof re-covers applications or directly over structural or lightweight insulating concrete.
- To be used for Mechanically Attached on new construction projects with Lightweight Insulating Concrete, Fiber Cement or Gypsum Deck

(1) Permitted with roofs with slopes greater than 2" per foot for compliance with external fire codes, refer to UL listings or contact WeatherBond.

Notes: N/A = Not Acceptable √ = Acceptable

2. **XFP HD** – A rigid insulation panel composed of a high-density (100 psi), closed-cell polyisocyanurate foam core laminated to coated-glass fiber-mat facer for use as a cover board or recover board. Available 1/2" thick 4’ x 8’ panel weight 11 lbs with an R-value of 2.5.

EPDM 05/2012
3. **Securock Cover Board** – A uniform composition of fiber-reinforced with no facer for use as a cover board or a thermal barrier. Available in 1/4” to 5/8” thick and 4’ x 4’ or 4’ x 8’ size boards. Long uninterrupted runs (>200’) may require slight gapping due to thermal expansion.

4. **Recovery Board** – A 1/2” or 1” thick high-density wood fiberboard with an asphalt coated facer for use as a cover board or recover board. Available 1/2” or 1” thick and 4’ x 4’ or 4’ x 8’ size boards.

5. **Dens Deck Prime** – Gypsum core that incorporates glass-mat facings on the top and bottom side. The top surface is pre-primed and provides excellent bond strength for fully adhered membrane for use as a cover board. Available in 1/4” to 5/8” and 4’ x 4’ or 4’ x 8’ size boards.

6. **Dens Deck Cover Board** – Gypsum core that incorporates glass-mat facings on the top and bottom side for use as a cover board. Available in 1/4” to 5/8” and 4’ x 4’ or 4’ x 8’ size boards.

7. **R-Tech FanFold Recover Board** – Closed-cell lightweight expanded polystyrene (EPS) with polymeric laminated faces which meets ASTM C578 for use as a recover board. Polymeric facer compatible with PVC membrane, while metallic side used with EPDM. Available in thicknesses of 3/8” to 3/4” with coverage 4’ x 50’ (2 squared). 4’ x 8’ units are also available.

### 2.03 Related Materials

#### A. Flashing

1. **WeatherBond RBR Black/WeatherBond RBR White Peel & Stick Cured Cover Strip** – A 6” and 9” widths and 100’ long and 12” wide by 50’ long WeatherBond RBR Black or WeatherBond RBR White 60-mil cured EPDM membrane laminated to a nominal 28-mil cured Peel & Stick Tape. The Cured Cover Strip is ideal for flashing gravel stops, metal edging and WeatherBond Seam Fastening Plates.

2. **WeatherBond RBR (black and white) Peel & Stick Uncured Flashing** – A 6” x 100’ and 9” or 12” wide by 50’ long, 60-mil thick WeatherBond RBR Black or WeatherBond RBR White uncured EPDM Flashing laminated to a 28-mil Peel & Stick Tape used in conjunction with EPDM Primer as an option to WeatherBond RBR Black/WeatherBond RBR White Uncured Flashing.

WeatherBond’s black uncured flashings are to be used in conjunction with WeatherBond RBR Black Roofing Systems and the WeatherBond RBR White uncured flashing is to be used in conjunction with WeatherBond RBR White Roofing Systems. WeatherBond RBR Black/WeatherBond RBR White Uncured Flashing is used mainly to flash inside and outside corners, pipes, scuppers and field fabricated pourable sealer pockets when the use of WeatherBond pre-fabricated flashing accessories is not feasible.

3. **WeatherBond RBR Black/WeatherBond RBR White Peel & Stick Curb Flashing** – A 20” wide by 50’ long WeatherBond RBR Black or WeatherBond RBR White cured 60-mil thick EPDM membrane with 5” wide Peel & Stick Tape along one edge to be used to flash curbs/skylights, etc.

4. **WeatherBond RBR Peel & Stick Curb Flashing** – A 20” wide by 50’ long WeatherBond RBR cured 60-mil thick EPDM membrane with 2 sections of Peel & Stick Tape (6” and 12”) used to flash curbs/skylights, etc.

5. **WeatherBond RBR Peel & Stick “T” Joint Covers** – A factory cut 6” x 6” uncured 60-mil thick EPDM flashing (with rounded corners) laminated to a nominal 28-mil Peel & Stick Tape, used to overlay field splice intersections and to cover field splices at angle changes.

6. **WeatherBond RBR White Peel & Stick Corner/T-Joint Cover** – A 7” by 9” precut 60-mil thick (white) Uncured Flashing with a 28-mil Peel & Stick Tape; used for inside and outside corners, to overlay field splice intersections, and to cover field splices at angle changes.

7. **WeatherBond RBR Black Inside/Outside Corners** – A 7” by 9” precut 60-mil thick Uncured Flashing with a 28-mil Peel & Stick Tape. Available in black only.

8. **WeatherBond RBR Black/WeatherBond RBR White Peel & Stick Pipe Seals** with Peel & Stick Tape on the deck flange are available for use with WeatherBond RBR Black/WeatherBond RBR White Roofing Systems:

   a. WeatherBond RBR Black Peel & Stick Pipe Seals are available in sizes: 1/2” to 3” and 1” to 6”.

   b. WeatherBond RBR White Peel & Stick Pipe Seals are available in one size: 1” to 6”
9. **WeatherBond RBR Black/WeatherBond RBR White Pourable Sealer Pocket**: A pre-fabricated Pourable Sealer Pocket which consists of a 2” wide plastic support strip with factory-applied, adhesive backed uncured flashing; black available in 4” 6” and 8” diameters for WeatherBond RBR Black EPDM. White available in 6” diameter only for WeatherBond RBR White EPDM.

**B. SEAM TAPES, PRIMERS, ADHESIVES AND SEALANTS/CLEANERS**

Refer to Technical Data Bulletins for material coverage rates and proper usage. Prior to the use of any of the products listed below, consult the Material Safety Data Sheets for applicable cautions and warnings.

1. **WeatherBond RBR P&S Seam Tape** – A 3” or 6” wide (used for mechanically attached roofing systems) by 100’ long Splice Tape used for splicing adjoining sections of EPDM membrane. Complies with the South Coast Air Quality Management District Rule 1168.

2. **WeatherBond Multipurpose Primer** – A solvent-based primer used to prepare the surface of EPDM membrane for application of P&S Seam Tape or Peel & Stick products.

3. **Low VOC EPDM Primer** – A low VOC (volatile organic compound) primer (less than 250 grams/liter) for use with P&S Seam Tape or Peel & Stick products. Available in 1 gallon pails.

4. **WeatherBond’s Lap Sealant** – A heavy-bodied material used at splice intersections beneath “T”-joint covers and at cut edges of reinforced EPDM membrane.

5. **WeatherBond Weathered Membrane Cleaner** – A clear, solvent-based cleaner used to loosen and remove dirt and other contaminants from the surface of exposed EPDM membrane (for repairs, etc.) prior to applying WeatherBond EPDM Primer. Available in 1 and 5-gallon pails.

6. **LC-60 Bonding Adhesive** – A high-strength, yellow colored, synthetic rubber adhesive used for bonding WeatherBond RBR EPDM membranes to various surfaces.

7. **Low VOC Bonding Adhesive** – A low VOC (volatile organic compound) bonding adhesive (less than 250 grams/liter) used for binding WeatherBond RBR Black/WeatherBond RBR White EPDM membranes to various surfaces. Adhesive is available in 5 gallon pails.

8. **Solvent-Free EPDM Bonding Adhesive**: A solvent free, odor free, non-flammable, low VOC Bonding Adhesive used to adhere non-reinforced EPDM to multiple substrates. This one-sided application adhesive requires adhesive to be applied to substrate only, when slopes are less than 1”, slopes greater than 1” or vertical substrates may require 2-sided application. When the solvent-free adhesive use is to be specified, applicators must review applicable product installation information listed on the appropriate Technical Data Bulletin.

9. **Aqua Base 120 Bonding Adhesive** (for use in areas where volatile organic compound, VOC, regulations are in effect): A semi-pressure-sensitive water based adhesive; used as a 2-sided contact adhesive for bonding WeatherBond RBR EPDM membrane to various surfaces. Complies with the South Coast Air Quality Management District Rule 1168.

10. **Water Cut-Off Mastic** – A one-component, low viscosity, self-wetting, Butyl blend mastic used as a sealing agent between the EPDM membrane or Uncured Flashing and applicable substrates.

11. **G-400 Pourable Sealer** – A black, two-component, solvent-free, polyurethane based product used for tie-ins and as a sealant around hard-to-flash membrane penetrating objects such as clusters of pipes and for daily seal when the completion of flashings and terminations cannot be completed by the end of each work day.

12. **One-Part Pourable Sealer** – A black, one-component, moisture curing, elastomeric polyether sealant used for attaching lightning rod bases and ground cable clips to the membrane surface and as a sealant around hard-to-flash penetrations such as clusters of pipes.

13. **Universal Single-Ply Sealant** – A one-part polyether, non-sagging sealant designed for sealing expansion joints, control joints and counter flashings. Available in white only.
2.04 Fastening Components

A. Reinforced Perimeter Strip (RPS)

1. **WeatherBond RBR Peel & Stick RPS** (Reinforced Perimeter Strip): A 6” or 9” wide, nominal 45-mil thick clean, cured reinforced EPDM black membrane with 3” wide Peel & Stick Tape laminated along one edge for the 6” wide RPS and along both edges for the 9” wide RPS.
   a. 6” wide Peel & Stick RPS is used horizontally or vertically at the base of walls, curbs, etc., in conjunction with Fastening Plates or Bars below the EPDM deck membrane for additional membrane securement.
   b. 9” wide Peel & Stick RPS is utilized for perimeter membrane securement on WeatherBond RBR mechanically attached roofing systems and primary securement on Metal Retrofit Roofing Systems. Packaged in rolls 100’ long.

2. **WeatherBond RBR White Peel & Stick RPS** (Reinforced Perimeter Strip) – A 6” wide, nominal 45-mil thick clean, cured, white reinforced EPDM membrane with 3” wide Peel & Stick Tape laminated along one edge. Used on WeatherBond RBR white fully adhered roofing systems.

B. Fasteners

The following Table illustrates criteria for fastening of WeatherBond Insulation with the referenced roof deck and include minimum penetration recommendations and pilot hole criteria.

Notes: N/A = Not Applicable
(1) Only 3” diameter insulation fastening plates can be used for insulation attachment.
(2) The pilot hole must be predrilled to a sufficient depth to prevent contact between the fastener point and any accumulated dust in the predrilled hole. This will help prevent bottoming out of the fastener during installation.
(3) For wood planks only, fastener penetration shall not exceed 1-1/2”.
(4) Most cementitious wood fiber decks do not require pre-drilling; however, WeatherBond should be contacted prior to installation for verification of specific types that may require a pilot hole to be predrilled.
(5) Pilot hole size may be varied to maximize pullout resistance.

All WeatherBond RBR Fasteners listed below can be used with WeatherBond RBR (black and white) Roofing Systems. Refer to the applicable specification for specific requirements.

1. **HPW Fastener** – A threaded E-coat square head fastener for insulation and reinforced membrane attached (mechanically attached systems) in conjunction with 2” diameter polymer plates. Used into steel, wood plank, minimum 15/32” thick plywood or minimum 7/16” thick oriented strand board (OSB).

2. **HPW-XL Fastener** – An oversized diameter (.315”) steel, threaded fastener used in conjunction with HPW-XL Polymer Plates for membrane securement into minimum 22 gauge steel or wood decks on mechanically attached roofing systems.

3. **InsuTite ASAP** – WeatherBond's InsulTite Fastener pre-assembled with a 3” diameter plate used for insulation attachment only on fully adhered and mechanically attached roofing systems. Installed using Olympic Fasteners’ Fastening Tool.

4. **InsuTite Fasteners** – A threaded Philips drive fastener used with WeatherBond Insulation Plates for insulation attachment to steel or wood decks.

5. **MP 14-10 Concrete Fastener** – A #14 threaded fastener with a #3 Philips driver used for minimum 3,000 psi concrete decks.
6. **CD-10 Nail-In Fastener** – A hammer-driven, non-threaded E-Coat Fastener for use with structural concrete decks rated 3,000 psi or greater.

7. **Polymer Gyptec Fastener** – A non-penetrating, plastic fastener and corresponding plate used with lightweight deck substrates such as fibrous cement and gypsum.

8. **Term Bar Nail-In** – A 1-1/4” long expansion anchor with threaded drive pin used for fastening WeatherBond Termination Bar or Seam Fastening Plates to concrete, brick or block walls. The fastener is set by hammering the drive pin into place.

9. **Sure-Tite (K-Fast) Fasteners** – A nominal 33-mil diameter fastener incorporating an oversized #3 Philips head used for membrane securement or mechanically attached roofing systems in conjunction with Sure-Tite (K-Fast) Fastening Bars into steel decks.

C. **Fastening Plates And Bars**

1. **Polymer Seam Plate** – A 2” diameter plastic barbed fastening plate used with WeatherBond HPW Fasteners for membrane and Peel & Stick RPS securement for mechanically attached roofing systems over steel roof decks.

2. **HPW-XL Plate** – A 2-3/8” diameter plastic barded listening plate used with HPW-XL Fasteners for membrane and Peel & Stick RPS securement for mechanically attached roofing systems over steel roof decks.

3. **Seam Fastening Plates** – A 2” diameter metal plate used for insulation attachment on mechanically attached roofing systems or membrane securement on fully adhered roofing systems in conjunction with the appropriate WeatherBond Fastener.

4. **Insulation Fastening Plates** – A nominal 3” diameter metal plate used for insulation attachment in conjunction with the appropriate WeatherBond Fastener.

5. **Gyptec Plates** – A 3” (26-gauge) steel plate for insulation and a 2” (22 gauge) steel plate for membrane attachment. The plates are stamped Galvalume-coated steel.

6. **Polymer Batten Strip** – A 1” wide by 1/20” thick polymer bar which is pre-punched 6” o.c. packaged in 250’ long coils used for membrane securement on mechanically attached roofing system in conjunction with HPW or HPWX Fasteners. Refer to applicable Technical Data Bulletin.

7. **K-Fast (Sure-Tite) Fastening Bar** – A 1” x .040” x 10’ long galvalume-coated steel fastening bar used primarily for membrane securement in conjunction with K-Fast/Sure-Tite Fasteners on mechanically attached roofing systems.

8. **Metal Fastening Bar** – A 1” wide metal bar which is pre-punched 6” o.c. and packaged in 10’ long strips to be used for membrane securement on mechanically attached roofing systems.

2.05 **Insulation Securement Adhesive**

1. **DASH Dual Cartridge and Bag in a Box Adhesive** – A two component (Part A and B), extrusion applied, low rise adhesive for bonding insulation to various surfaces. When extruded at 12” on center the coverage rate is 600 sq. ft. per carton of Dual Cartridges or 170 sq. ft. per gallon for Bag in a Box Adhesive. A standard version is available for temperatures of 50°F (10° C) and above and a winter “IC” formula is available for temperatures between 25-50°F (-4 -10° C)

2. **OlyBond 500™ BA** – A two-component, polyurethane, low-rise expanding adhesive used to bond insulation to various substrates. Packaged in 5-gallon pails of Part A and Part B formulations that are applied using a mechanical dispense system. Applied in 1/2” to 3/4” beads or ribbons at the rate of 1 gallon per 150-250 square feet for 12” o.c. bead spacing. Perimeter bead spacing patterns and acceptable insulation and deck types are listed in the applicable Technical Data Bulletin.

3. **OlyBond Spot Shot** – A two-component, polyurethane construction grade, low-rising expanding adhesive designed for bonding insulation to various substrates. Applied in 1/2” to 3/4” beads or ribbons using a portable 1:1 applicator (oversized, dual-cartridge caulking gun). Refer to the Technical Data Bulletin for bead spacing with reference to building height.
2.06 Vapor/Air Barrier

A. General

The use of a vapor retarder to protect insulation and reduce moisture accumulation within an insulated roofing assembly should be investigated by the specifier, especially on projects with high interior humidity, such as, swimming pools, breweries, pulp mills, etc.

If insulation is to be fully adhered to the vapor retarder with DASH Adhesive, the vapor retarder must be compatible and shall be fully adhered to the substrate. Available products include WeatherBond supplied “peel and stick” rubberized asphalt membrane with compatible film coating (WeatherBond’s 725 Air and Vapor), and spray or roller applied Butyl coatings. Installation requirements for WeatherBond’s 725 Air and Vapor Barrier are identified in Spec Supplement G-07-11 “Application Procedures for 725 TR Air and Vapor Barrier” in the WeatherBond Technical Manual.

1. 725 TR Temporary Roof Air and Vapor Barrier – A 40-mil thick composite consisting of 35-mil self-adhering rubberized asphalt membrane laminated to a 5-mil UV resistant poly film with an anti-skid surface which is fully compatible with DASH Adhesive. 725TR can also function as a temporary roof for up to 120 days. Available in rolls 39” wide by 75’ long (244 square feet).

2. CCW Cav-Grip – Is a low VOC contact adhesive used to prime surfaces for the application of 725TR. It features a quick dry time and ease of application from the self-contained pressurized cylinder. Cav-Grip is an alternate, high-strength, adhesive using a blend of VOC exempt and non-exempt solvent which complies with the State of California Clean Air Act of 1988 (updated in 1997). Coverage rate is 2,500-3,000 sq. ft. per cylinder.

3. CCW 702/702 LV Primer – A single component, solvent based, high tack primer used to provide maximum adhesion between WeatherBond 725 TR Temporary Roof Air and Vapor Barrier and an approved substrate. Applied by spray or long nap roller with a coverage rating ranging from approximately 250 square feet per gallon on smooth finishes (i.e., concrete) to 75 square feet per gallon on porous surfaces (i.e., Dens-Deck Prime gypsum board). Available in 5-gallon containers.

2.07 Edges And Terminations

A. General

Products listed below can be used with any of the available WeatherBond Roofing Systems. Refer to the applicable WeatherBond details and installation instruction manuals for specific installation criteria.

B. Products

1. WeatherBond Drip Edge: Designed for use on Fully Adhered and Mechanically Attached Roofing Systems. Includes a 22 gauge continuous 12’ pre-punched 90-degree angle cleat and 12’ long fascia sections. Incorporates concealed joint covers and strong 1-1/4” ring shank nails to provide long-term holding power. A selection of colors in 24 gauge steel, Kynar® 500 and 32-mil aluminum finish or Kynar 500 is available.

2. Termination Bar – A 1” wide and 98-mil thick extruded aluminum bar pre-punched 6” on center which incorporates a sealant ledge to support Lap Sealant and provide increased stability for membrane terminations.

3. Other WeatherBond Metal Edging/Copings suitable for use with roofing system included in the section can be found in the miscellaneous section at the end of the WeatherBond Technical Manual.

2.08 Roof Walkways

Walkways are to be specified at all traffic concentration points (i.e., roof hatches, access doors, rooftop ladders, etc.), and if regular maintenance (once a month or less) is necessary to service rooftop equipment.

1. Walkway Types:

a. (White or Black) Pressure-Sensitive Molded Walkway Pads – Molded walkway pads with factory applied Peel & Stick Tape are used to provide protection for areas of EPDM membrane that are exposed to regular rooftop maintenance.

b. Interlocking Rubber Pavers, 24” x 24” x 2” thick rubber paver weighing approximately 24 pounds per unit, 6 pounds per square foot manufactured from recycled rubber, which provides a resilient, shock absorbing, weather resistant surface. Designed primarily for use as a walkway or on terrace areas offering a unique,
environmentally sound advantage over concrete pavers. Features include freeze/thaw stability, bi-directional drainage and no breakage concerns. Available in black and terra cotta.

2.09 Other WeatherBond Accessories

Refer to Spec Supplement P-01-11 “Related Products” for additional accessories.

Part III- Execution

*Information listed in this specification is provided as a recommendation. Additional requirements dictated by Regulatory Agencies, Building Insurance or Specifiers must be complied with and are considered to be beyond the scope of this specification.*

3.01 General

A. Material Safety Data Sheets (MSDS) must be on location at all times during transportation, storage and application of materials. The contractor shall follow all safety regulations as recommended by OSHA and other agencies having jurisdiction.

B. Subject to project conditions, it is recommended to begin the application of this roofing system at the highest point of the project area and work to the lowest point to prevent water infiltration. This will include completion of all flashings, terminations and daily seals.

C. A proper substrate shall be provided by the building owner. This structure shall be sufficient to withstand normal construction loads and live loads.

3.02 Roof Deck/Substrate Criteria

A. Proper decking shall be provided by the building owner. The building owner or their designated representative must ensure that the building structure is investigated by a registered engineer to assure its ability to withstand the total weight of the roofing system, as well as construction loads and live loads, in accordance with all applicable codes.

B. Withdrawal resistance tests are strongly suggested to determine the suitability of a roof deck. Refer to Design Reference DR-06-11 “Withdrawal Resistance Criteria”

C. Defects in the substrate surface should be reported and documented to the specifier, general contractor and building owner for assessment.

D. On structural concrete decks, when a vapor retarder is not used, gaps in the deck along the perimeter and around penetrations must be sealed along with vertical joints between tilt-up panels, if present, to prevent infiltration of hot humid air and possible moisture contamination resulting from condensation. This is specifically important when adhesive is used to attach the roof insulation.

E. **For all projects** (new or retrofit), the substrate must be relatively even without noticeable high spots or depressions. Accumulated water, ice or snow must be removed to prevent the absorption of moisture in the new roofing components and roofing system.

F. Prior to the placement of membrane underlayment, clear the substrate of debris and foreign material that may be harmful to the roofing system. Gaps greater than 1/4” must be filled with an appropriate material.

G. For direct application over an acceptable roof deck/substrate or when Protective Mat is specified as the membrane underlayment in accordance with the Roof Deck and Substrate Criteria Table, the substrate must be smooth, steel trowel finished (structural concrete), free of debris, protrusions, sharp edges and loose and foreign material. Cracks or voids in the substrate, greater than 1/4”, must be filled with an appropriate material.

H. **On retrofit - recover projects**, cut and remove wet insulation, as identified by the specifier, and fill all voids with new insulation of type specified so it is relatively flush (+/- 1/4”) with the existing surface.

1. Entrapment of water between the old and new membrane can damage and deteriorate new insulation/underlayment between the two membranes. **If a vapor retarder or air barrier is not specified,** WeatherBond recommends the existing membrane be perforated to avoid potential moisture accumulation and to allow the detection of moisture to enable the building owner to take corrective action. This can be accomplished by drilling approximately 3/4” diameter holes every 100 square feet in the existing built-up roof or single-ply membrane (excluding PVC membrane).
2. **For existing PVC membranes**, if the membrane is not removed, it must be cut into maximum 10’ by 10’ sections. All PVC flashings at the perimeter, roof drains and roof penetrations must be removed.

3. When installing this roofing system over an existing **gravel surfaced built-up roof, loose gravel must be removed**. Power brooming is recommended by WeatherBond to remove the loose gravel, which may trap moisture. Any uneven areas of the substrate must be leveled to prevent insulation from bridging.

4. On retrofit projects, all existing phenolic insulation must be removed.

5. Refer to table below for other Recover/Retro-fit considerations

I. The following table identifies the **acceptable roof decks/substrates** and the **minimum underlayment recommendations** for WeatherBond’s EPDM Roofing Systems.
# Roof Deck & Substrate Criteria

## Notes:

1. Local codes must be consulted regarding thermal barrier requirements.
2. Mechanically Attached Systems cannot be specified on steel decks less than 22 gauge or for corrugated steel decks, regardless of gauge.
3. The Fully Adhered Roofing System may be specified directly over a new approved cellular or perlite lightweight insulating concrete substrate with a minimum compressive strength of 225 psi. Except when the lightweight insulating concrete is poured over slotted steel decks, pressure relief vents must be specified at a minimum rate of 1 every 2000 square feet. Direct Application is not permitted where the lightweight concrete is poured over an existing roofing material. Refer to Spec Supplement G-03-11 “Fully Adhered Application Over Lightweight Insulating Concrete”.
4. WeatherBond RBR Black Fully Adhered and Mechanically Attached Systems may be applied directly to the substrate provided asphalt on existing smooth surfaced built-up roof has a softening point above 185°F (85°C). WeatherBond RBR White Fully Adhered Roofing Systems are not recommended for direct application to the substrate due to possible staining of the membrane surface. For direct application over smooth BUR or granule surface BUR or in conjunction with HP Mat make sure substrate is clean and free of roofing cement and fresh asphalt to avoid sheet contamination and staining of white color membrane.
5. Loose gravel must be removed to avoid entrapment moisture.
6. Existing coal tar could drip back into the building, especially when new insulation does not provide sufficient thermal value to prevent the surface of the coal tar from softening.
7. An approved Insulation/underlayment is required over PVC roofing systems of any type.
8. Direct application permitted over smooth surfaced modified bitumen. Membrane shall be positioned with length of sheets parallel to modified bitumen field seams. At end laps or other locations where EPDM splices intersect modified bitumen field seams, 6" wide Uncured or Peel & Stick Flashing must be applied over intersections.
9. If insulation is specified to be secured to an existing coal tar pitch roof with DASH Adhesive or hot asphalt, minimum 1.4" thick Polyisocyanurate insulation is the required minimum thickness when WeatherBond RBR Black EPDM is specified. Minimum 1" thick Polyisocyanurate is the required minimum thickness when WeatherBond RBR White EPDM is specified.
J. Vapor Retarder Installation

For Vapor Retarder refer to Spec Supplement G-07-11 “Application Procedures for 725 TR Temporary Roof Air and Vapor Barrier”. Follow the respective vapor retarder manufacturer’s recommended installation procedures and the specifier’s instructions for the installation of the product specified. When insulation is to be set in adhesive, verify compatibility with WeatherBond when Vapor Retarder by others is specified.

K. Wood Nailers

1. Install wood nailers in locations that have been designated by the specifier and as approved by WeatherBond. Refer to Design Reference DR-08-11 “Wood Nailers and Securement Criteria” for Wood Nailer Criteria.

3.03 Insulation/Underlayment

A. General

1. Roof insulation thickness must be determined by the thermal value required for each project and may be subject to code approval limitations. On projects where a vapor retarder is used, the specifier must calculate insulation thickness to ensure the temperature at the vapor retarder will not fall below the dew point.

2. New construction projects in cold climate regions, the use of vapor retarders or air barriers is strongly recommended to protect insulation from moisture generated during construction.

3. Multiple layers of insulation are recommended with all joints staggered between layers.

4. Do not install more insulation/underlayment than can be covered by membrane in the same day.

5. All insulation boards must be butted together with no gaps greater than 1/4”. Gaps greater than 1/4” are not acceptable.

6. Restrictions:
   a. WeatherBond Roofing Systems cannot be specified in conjunction with Phenolic Insulation.
   b. Fiberglass insulation cannot be specified with WeatherBond's Fully Adhered and Mechanically Attached Roofing Systems, even if overlaid with additional insulation or membrane underlayment.
   c. Do not specify perlite boards directly under the EPDM membrane on Fully Adhered or Mechanically Attached Roofing Systems.
   d. Wood fiberboard manufactured by others is not an acceptable underlayment for use with Fully Adhered Roofing Systems.

3.04 Insulation Attachment

A. General

1. Prior to proceeding with insulation securement refer to Tables, Paragraph 1.05, for recommended attachment method and appropriate fastening density.

B. Fully Adhered Roofing Systems

1. **Mechanical Attachment**, insulation fastening density will vary based on insulation type and thickness. Tables in Paragraph 1.05 should be referenced for fastening density and the appropriate WeatherBond detail may be consulted to identify acceptable fastening pattern.

   a. For code compliance, increased fastening density may be required depending upon project wind speed and wind uplift requirement. Refer to Design Reference DR-05-11 “Insulation Fastening Patterns” for fastening pattern reference.

   b. When insulation securement is to comply with Factory Mutual (FM) approvals, follow the requirements of the specifier concerning additional securement at the roof perimeter and corners. Also refer to Design Reference DR-05-11 “Insulation Fastening Patterns” for various fastening patterns.
c. On Reroof/No Tear off projects with a maximum roof height of 40’, any WeatherBond Insulation (i.e., 1/2” XFP HD, Recovery Board, Polyisocyanurate less than 1-1/2” thick) may be secured at the minimum rate of 11 Fasteners per 4’ x 8’ board (5 Fasteners per 4’ x 4’ board).

d. Oriented strand board (OSB) when specified as the membrane underlayment, must be Mechanically Attached to the deck at the rate of 17 fasteners per 4 x 8 board in accordance with WeatherBond Details. If OSB is to be used in conjunction with WeatherBond urethane based adhesive, an OSB/Polyisocyanurate composite board is recommended. When positioning OSB it shall not be butted allow 1/8” gaps between boards to prevent cupping.

2. Adhesive attachment, WeatherBond Urethane Adhesive Bead applied (DASH or Olybond) may be used. CAUTION: Apply adhesive bead so that the distance from the edge of the board does not exceed half the bead spacing (i.e. within 6” of bead spacing of 12” O.C.).

CAUTION: Do not apply urethane adhesives directly to un-weathered asphalt, (new or residual)

CAUTION: Especially in cold regions on tear-off projects or new construction gaps between horizontal and vertical surfaces of the roof area as well as gaps around penetrations must be sealed to prevent interior warm air from infiltrating and condensing within the roofing assembly. Condensing moisture could weaken bottom insulation facer and eventually result in dislodgement or loose boards when adhesive is used.

a. On FM Global insured projects, consult FM Global’s local representative concerning the use of adhesive to attach insulation to steel decks.

b. Check to ensure the substrate is dry. Adhesive cannot be applied to a wet or damp surface.

c. Apply Adhesive over the dry substrate area at the coverage rates indicated in Spec Supplement G-02-11 “Adhesive Application/Coverage Rate”.

d. Allow the adhesive to rise up approximately 1/8” and develop strings prior to setting insulation boards into adhesive.

NOTE: String-time is measured by touching the adhesive with a splice wipe and looking for development of “strings” of adhesive as you pull the splice wipe out of the adhesive. With DASH Adhesive, string time is generally around 1-1/2 – 2 minutes after application at room temperature.

e. Walk the boards into the adhesive and roll using the 30” wide, 100 – 150 pound weighted steel roller to ensure full embedment. Optimal set up time should be approximately 5 to 10 minutes.

CAUTION: Walking on the boards immediately after placement in adhesive can cause slippage/movement until the adhesive has started to set up.

On roofs with a slope greater than 1/2” in 12”, begin adhering insulation at the low point and work upward to avoid slippage.

A person should be designated to walk/roll in all boards and trim/slit or apply weight as needed to ensure adequate securement.

f. Refer to Spec Supplement G-02-11 “Adhesive Application/Coverage Rate” for coverage rates.

3. Alternate attachment method, the specifier may select an alternate insulation attachment that incorporates a solid mopping of the insulation with hot asphalt (ASTM D312, Type III or IV).

a. Extruded or Expanded Polystyrene insulation are not acceptable when this alternate attachment method is specified.

b. The existing gravel surfaced built-up roof must be scraped to remove all loose gravel. Large blisters that may prevent continuous embedment of insulation must be repaired. The surface of the substrate must also be dry and clear of foreign material.

c. On coal tar pitch, when deemed compatible by the specifier, minimum 1.5” Polyisocyanurate is the required membrane underlayment when using WeatherBond RBR Black membrane. If WeatherBond RBR White membrane is used, minimum 1” thick Polyisocyanurate is required.

d. For successful attachment, proper asphalt temperatures must be maintained and the specifier's requirements concerning the installation of a base sheet (where required) and quantity of hot asphalt must
be followed.

e. The maximum insulation board size shall not exceed 4’ X 4’. Trim insulation boards around crickets and saddles to ensure continuous embedment.

f. Care must be exercised to prevent contamination of the top surface of the insulation. Asphalt oozing through insulation joints must be wiped from the surface. Contact with fresh asphalt can result in discoloration of the WeatherBond RBR White membrane.

g. Use of a grid nailer subdividing the roof in individual sections of 2400 square feet is highly recommended but not required.

h. The wood nailers are installed relatively flush with the insulation surface and the membrane is to be fastened with seam fastening plates and WeatherBond HPW fasteners on 12” o.c. For wood nailer installation, refer to Design Reference DR-08-11 “Wood Nailers and Securement Criteria”.

C. Mechanically Attached Roofing System

1. **WeatherBond Fasteners and Fastening Plates are recommended for insulation securement.** Refer to Insulation Fastening Criteria Table in Paragraph 2.05, for appropriate fastener and deck penetration. The fastener can be used either 2” diameter WeatherBond Seam Fastening Plates or 3” diameter WeatherBond Insulation Fastening plate.

2. Any WeatherBond approved insulation or cover board shall be Mechanically Attached to the roof deck at the minimum rate of 1 fastener and plate per every 8 square feet (4 fasteners in a 4 x 8 board) for warranties up to 15 years.

   **CAUTION:** WeatherBond Polyisocyanurate Insulation with a thickness less than 1.5” installed over an existing roofing membrane without a tear-off must be Mechanically Attached to the roof deck with a minimum of 1 fastener and plate for every 4 square feet or less of insulation.

3. Use of Dens Deck and Dens Deck Prime should be limited to assemblies with slopes greater than 2” per foot to ensure compliance with external fire codes, care shall be exercised to ensure polymer plates are fully seated.

3.05 Membrane Placement And Securement

A. General

1. **Ensure** that water does not flow beneath any completed sections of the membrane system by completing all flashings, terminations and daily seals by the end of each workday.

2. **Sweep** all loose debris from the substrate.

3. If aesthetics are of concern when WeatherBond RBR White EPDM is to be used, protection should be specified to avoid discoloration of the white membrane surface resulting from adhesive residue.

4. Adjoining sheets of EPDM membrane are spliced together using P&S Seam Tape and Primer.

5. In addition to the primary membrane securement (Bonding for Fully Adhered and Fastening for Mechanically Attached Assemblies), Additional membrane securement is required at the perimeter of each roof level, roof section, curb, skylight, interior wall, penthouse, etc., at any inside angle change where slope or combined slopes exceed 2” in one horizontal foot, and at other penetrations in accordance with the applicable WeatherBond details. Refer to Paragraph G for additional membrane securement.

B. Membrane Placement

EPDM membrane with factory-applied tape is available in various widths. Only 8’ and 10’ wide sheets are available in a double pack (2 sheets per roll). Prior to unrolling sheets ensure the tape side is properly located so that seams are properly shingled down slope. (Pre-applied P&S Seam Tape should always be facing downwards once the sheet is unrolled).

1. **Position** EPDM membrane over the acceptable substrate without stretching. For Mechanically Attached assemblies, ensure the proper number of perimeter sheets are properly positioned along the perimeter of the roof. And field sheets are positioned perpendicular to the steel deck flutes.
2. **Allow** the membrane to relax approximately 1/2 hour prior to splicing, bonding (Fully Adhered Systems) or fastening (Mechanically Attached systems).

3. **Place** joining membrane sheets in the same manner, overlapping edges appropriately to provide for the minimum splice width. It is recommended all splices be shingled to avoid bucking of water.

C. Membrane Securement/Bonding – Fully Adhered Roofing System

1. **Adhere** EPDM membrane to an acceptable substrate with WeatherBond EPDM bonding adhesive. Comply with Labels, Material Safety Data Sheet (MSDS) and Technical Data Bulletins for installation procedures and use. Adhesive must be applied to both the membrane and the surface to which it is being bonded.

2. On projects at high altitudes (6,000’ and above), rapid flash off (drying) of EPDM Adhesive and Primers will occur due to low atmospheric pressure.

3. **Fold** membrane sheet back so half of the underside of the sheet is exposed. Sheet fold should be smooth without wrinkles or buckles

4. **Stir** EPDM Adhesive thoroughly scraping the sides and the bottom of the can (minimum 5 minutes stirring is recommended). Bonding surfaces must be dry and clean.

   **CAUTION:** If aesthetics are of concern when WeatherBond RBR White EPDM membrane is used, protect the white surface next to the edges of the folded membrane sheet so Adhesive will not discolor the white surface. Do not place Adhesive containers or their lids directly on the white surface of the WeatherBond RBR White EPDM membrane.

5. **Apply Bonding** Adhesive evenly, without globs or puddles with a plastic core medium nap paint roller. A 9” roller will easily fit into the 5-gallon containers.

   **Apply** Adhesive to both the membrane sheet and the substrate to achieve continuous coating of both surfaces at a coverage rate of approximately 120 square feet per gallon per one surface (membrane or substrate) or approximately 60 square feet per gallon per finished surface (includes coverage on both membrane and substrate). Depending on adhesive used and the substrate type adhesive coverage rate will vary. Refer to Technical Data Bulletin for the appropriate adhesive for the proper coverage rate.

   **A mechanical roller dispenser or a mechanical sprayer** can be used to apply Bonding Adhesive when the continuous coating and coverage rate noted above are maintained. When used, **the adhesive must be rolled after applying** with a plastic core medium nap paint roller to provide continuous coverage.

   **CAUTION:** Due to solvent flash off, condensation may form on freshly applied Adhesive when the ambient temperature is near the dew point. If condensation develops, possible surface contamination may occur and the application of Adhesive must be discontinued. Allow the surface to dry and apply a thin freshener coat at the coverage rate, which is approximately half of the coverage rate stated above to the previously coated surface when conditions allow for continuing.

6. **Allow** adhesive to dry until it is tacky but will not string or stick to a dry finger touch.

7. **Roll** the coated membrane into the coated substrate while avoiding wrinkles.

8. **Brush** down the bonded half of the membrane sheet, immediately after rolling the membrane sheet into the adhesive, **with a soft bristle push broom** to achieve maximum contact.

9. **Fold** back the unbonded half of the membrane sheet and repeat the bonding procedure.

D. Membrane Securement/Mechanically Attached Roofing System (Fastening)

1. EPDM membrane shall be mechanically attached to the structural deck with specified WeatherBond Fasteners and designated Plates or Bars, for fastening densities and numbers of perimeter sheets refer to Tables, Paragraph 1.05.
2. Membrane Fastening Selection Table

</tr>
</tbody>
</table>

Refer to Tables in Paragraph 1.05 for fastening densities and number of perimeter sheets.

*Determine proper fastener length for deck penetration, refer to Table 2.05B.

3. On steel decks, membrane shall be positioned with seams perpendicular to the steel deck flutes. This allows the external forces on the roof assembly to be distributed between multiple steel deck panels. Refer to Design Reference DR-06-11 “Withdrawal Resistance Criteria”.

4. When mechanical securement is not provided in some of the WeatherBond Common Details (i.e., pipes and pourable sealer pockets), additional Seam Fastening Plates must be used for membrane securement. The plates must be positioned a maximum of 12” away from the penetration, spaced a maximum of 12” on center and flashed in accordance with the applicable WeatherBond Detail.

5. Perimeter Sheets

The number of perimeter sheets and fastener spacing is dependent on the building height and wind zone location as outlined in Tables in Paragraph 1.05.

The roof perimeter is defined as all edges of each roof section (i.e., parapets, building expansion joints at adjoining walls, penthouse walls, etc.). When multi-level roofs meet at a common wall, the adjacent edge of the upper roof is treated as a roof perimeter if the difference in height is greater than 3’. Perimeter sheets are not required at the base of the wall at the lower level.

**NOTE:** Expansion joints, control joints and fire walls in the field of the roof or roof ridges with slopes less than 3” to the horizontal foot are not considered as part of the roof perimeter.

Perimeter sheets can be formed by using individual 4’-6” wide sheets or by sub-dividing 8’ or 10’ wide field sheet using RPS strip or row of seam fastening plates as described below.

a. **Individual Perimeter Sheets (4’-6”)**

   Position the membrane along the perimeter of the roof over the acceptable insulation/underlayment. The perimeter membrane width from line of securement to line of securement should be approximately 3’6” to 4’0” wide.

b. **RPS (Reinforced Perimeter Strip) Method**

   1) When **field sheets are positioned parallel to a roof perimeter**, 9” wide Peel & Stick RPS (with 3” wide tape each side) shall be placed approximately down the center of the 8’ or 10’ wide field membrane sheets. When a RPS divides a field sheet in half, two perimeter sheets are created.

   2) When a 8’ or 10’ wide reinforced EPDM membrane sheet extends perpendicular to the edge of the roof, install 9” wide Peel & Stick RPS beneath the EPDM membrane sheet approximately of 3’-6” for the 8’ field sheet to approximately of 4’-0” for the 10’ field sheet from the edge of the roof. When multiple perimeter sheets are required, additional RPS may be positioned approximately 3’-6” to 4’-0” from the previous RPS to create additional perimeter sheets.

   **CAUTION:** 6” wide Peel & Stick RPS is only available with 3” wide P&S Seam Tape on one side and therefore cannot be used to form perimeter sheets.

   3) Refer to Applicable WeatherBond Details for installation.
c. **Fastening Plates Method**

When field sheets extend to the edge of the roof, approved fastening plates can be installed through the reinforced membrane 3'-6" to 4'-6" from the roof edge which will be flashed with 6" wide Peel & Stick Cured Cover Strip. When field sheets are positioned parallel to the roof edge, fastening through the membrane along the centerline creates two perimeter sheets. When multiple perimeter sheets are required, additional fastening plates shall be positioned 3'-6" to 4'-6" from the previously installed fastening plates. Refer to applicable WeatherBond Details for installation.

d. **Building with Special Conditions:**

Air pressurized buildings, canopies and buildings with large openings where the total wall openings exceed 10% of the total wall area on which the openings are located (such as airport hangers, warehouses and large maintenance facilities) will typically require additional perimeter membrane securement, an increased fastening density or other enhancement.

e. **Building with large openings**

When any wall contains major openings with a combined area which exceeds 10% of the total wall area on which the openings are located, either four 4-1/2' wide to two 10' wide reinforced EPDM membrane sheets (centered over the opening) must be specified as shown.

1) 9" wide Peel & Stick RPS (Reinforced Perimeter Strip) shall be specified in conjunction with the 10' wide membrane sheets.

2) The 9" wide Peel & Stick RPS is to be positioned beneath the 10' wide membrane sheet along the centerline and shall be secured with Polymer Seam Plates (required for steel decks) or Seam Fastening Plates. All fasteners and plates shall be spaced at the rate required at the roof perimeter as shown on the membrane securement charts on the previous pages.

3) As an option to the above perimeter securement, a fully adhered membrane section may be used in lieu of the mechanically attached membrane at large openings in accordance with the WeatherBond Specification for the WeatherBond RBR (black and white) Fully Adhered Roofing System.

**NOTE:** Depth of perimeter area, noted above, shall not be less than 2.5 times the width of the opening.

f. **Buildings with overhangs**

The membrane must be specified with securement 3-1/2' to 4-1/2' over the entire overhang area extending onto the main roof deck a minimum of 3 1/2' when at the same level.

1) This can be achieved utilizing individual 4-1/2' perimeter membrane sheets or 10' wide membrane sheets in conjunction with 9" wide Peel & Stick RPS as described above.

2) As an option, a fully adhered membrane section may be used in lieu of the mechanically attached membrane at building overhangs in accordance with the WeatherBond Specification for the WeatherBond RBR (black and white) Fully Adhered Roofing System.

6. **Field Membranes**

   a. **Position** field membrane sheets adjacent to perimeter membrane to allow a minimum 6" overlap, 3" from the center of the plate or bar in front and back.
b. **Secure the field and perimeter membrane sheets** along the pre-printed blue line approximately 3” from the edge of the membrane sheet at the approved fastening density with the required WeatherBond Fastener and WeatherBond Seam Plates or Bars. Refer to “Membrane Fastener Selection” Table in Paragraph 3.05 for further information.

Correct fastener placement must conform to the following:

1) The **minimum** distance between the bottom membrane edge and the nearest edge of the fastening plate or bar must be **2”**.

2) The **minimum** distance between the overlapping membrane edge and the nearest edge of the fastening plate or bar must be **2”**.

c. On new construction projects, where direct application of the membrane is specified over Protection Mat over lightweight insulating concrete, standard **2”** diameter Seam Fastening Plates must be used since the Polymer Seam Plates will not properly seat. Sure-Tite Fastening Bars may also be utilized.

d. **Position** adjoining membrane sheets to allow a minimum overlap of **6”** where Fastening Plates are located (along length of the membrane); at the same time overlap end roll sections (width of the membrane) a minimum of **3”**.

e. Work shall progress across the roof with a minimum **6”** overlap provided at the previously secured sheet edge. The opposite length of the sheet must be secured with approved Fastening Plates or bars and overlapped accordingly.

**E. Membrane Splicing**

1. **General**

a. **Fully Adhered Roofing Systems**

1) Tape splices must be a minimum of 2-1/2” wide using 3” wide P&S Seam

b. Projects with 90 mil membranes

1) WeatherBond RBR (Black) Membrane

Splices may be a minimum of 2-1/2” wide using 3” wide Factory-applied P&S Seam Tape. In addition the entire field splice must be overlaid with a continuous 6” wide Peel & Stick Cured Cover Strip.

OR

Splices may be a minimum of 5-1/2” wide using 6” **Factory-Applied P&S Seam Tape**. In addition and in lieu of the continuous cover strip, “T”-Joints must be flashed with a bead of lap sealant and a double layer of Peel & Stick flashing. The first layer shall be 6”x6” Peel & Stick uncured EPDM flashing, followed by second layer of 12”x12” Peel & Stick Cured Cover strip.

2) WeatherBond RBR (White) Membrane

Splices must be a minimum of 5 1/2” wide using 6” P&S Seam Tape. All Splice Intersections must be flashed with a bead of lap sealant and two layers of Peel & Stick uncured EPDM flashing. The bottom layer shall be 6”x6” covered with 12”x12” top layer. Both layers shall be centered over the splice intersection and sealed with WeatherBond RBR (white) Lap Sealant per the applicable WeatherBond Detail.

**Note:** WeatherBond RBR (white) Peel & Stick Uncured Flashing is available only in rolls of 6”, 9” or 12” wide. Material used for Overlayment shall be cut from the appropriate roll

c. **WeatherBond RBR Reinforced Mechanically Attached Roofing Systems**

**Side laps** where fastening plates are placed shall be spliced using 6” wide Factory-Applied P&S Seam Tape or field applied P&S Seam Tape. The splice tape shall be centered over the plates to extend
approximately 2" on each side. P&S Seam Tape must extend approximately 1/8" beyond the edge of the overlapping membrane. Center a single layer of 6"x6" Peel & Stick uncured EPDM flashing at all splice intersections.

**End Laps**, shall be spliced using either 3" or 6" wide P&S Seam Tape resulting in a minimum splice of 2 1/2" or 5 1/2" wide.

2. For splicing procedures, cautions and warnings refer to Spec Supplement E-02-11 “Membrane Splicing and Splice Repairs” for information.

F. **Additional Membrane Securement**

Securement must be provided at the perimeter of each roof level, roof section, expansion joint, curb flashing, skylight, interior wall, penthouse, etc., at any inside angle change where slope exceeds 2" in one horizontal foot, and at other penetrations in accordance with WeatherBond’s details and securement options as listed below.

Securement may be achieved as follows:

1. **Peel & Stick RPS (Reinforced Perimeter Strip)**

   Peel & Stick RPS is a 6" wide strip of reinforced EPDM membrane with factory-applied 3" wide P&S Seam Tape and is installed in conjunction with WeatherBond EPDM Fasteners and 2" diameter Seam Fastening Plates spaced a maximum of 12" on center below the EPDM deck membrane (Polymer Seam Plates, Polymer Batten Strips or ST Fastening Bars are required for Mechanically Attached Roofing Systems over steel decks). The securement strip can be installed horizontally or vertically at the base of walls or penetrations.

   a. Loose lay the 6" wide Peel & Stick RPS along parapet walls and fasten with Seam Fastening Plates and the appropriate WeatherBond fastener to the roof deck or into the parapet wall. Spacing of the Seam Fastening Plates shall be a maximum of 12" on center.

      1) For horizontal attachment, the reinforced strip must be positioned a minimum of 1/8" to a maximum of 6" away from the angle change with pressure sensitive side facing away from the parapet and towards the roof plane.

      2) For vertical attachment, the reinforced strip must be attached to the vertical wall with pressure sensitive side extending onto the roof surface.

   b. Adjoining sections of the reinforced strip need not be overlapped; however, gaps between adjoining sections must not exceed 1".

   **CAUTION:** When RPS is used for membrane securement along metal edgings, refer to the appropriate detail for applicable installation criteria. For some metal edge details, adjoining sections of the reinforced strip must be overlapped and spliced.

   c. **When using Peel & Stick RPS, clean the underside of the membrane with WeatherBond Primer** and allow proper drying prior to removing the release film from the RPS.

      **CAUTION:** On fully adhered systems discontinue bonding adhesive application on the underside of the membrane in area of the sheet where contact with the Peel & Stick RPS is to occur. Contact between Peel & Stick RPS and membrane coated with adhesive can result in poor peel and shear values.

2. **Seam Fastening Plates**

   When the use of Peel & Stick RPS is not feasible (at smaller curbs or skylights) 2" diameter Seam Fastening Plates may be used.

   a. Seam Fastening Plates may be installed horizontally into the structural deck or into walls or curbs.

   b. Securement of the EPDM membrane with the approved WeatherBond Fasteners and Seam Fastening Plates must be a maximum of 12" on center starting 6" minimum to 9" maximum from inside and outside corners.

   c. If horizontal wood nailers are provided, secure the Seam Fastening Plates to the wood nailer with WeatherBond HPW Fasteners. Nails (i.e. ringshank, roofing, etc.) are not acceptable for securement.

   d. After securing the Seam Fastening Plates, flash in accordance with the appropriate WeatherBond Detail.
3.06 Flashings

A. General Considerations

1. All vertical field splices at the base of a wall or curb must be overlaid with Peel & Stick “T” Joint Covers, a 6” by 6” section (with rounded corners) of WeatherBond RBR (black and white) Peel & Stick Uncured EPDM Flashing centered over the field splice.

2. **Peel & Stick Uncured EPDM Flashing** must be limited to the overlayment of vertical seams (as required at angle changes), or to flash inside/outside corners, vent pipes, scuppers and other unusually shaped penetrations where the use of Pre-molded Pipe Seals, cured EPDM membrane or Peel & Stick Cured Cover Strip is not practical.

   **NOTE:** When using Peel & Stick products in colder temperatures, use a heat gun to warm the product. Apply heat to the EPDM flashing side of the product. Do not apply heat directly to the pre-applied adhesive. The Peel & Stick Flashing must be applied immediately after primer flashes off. Refer to “Membrane Splicing with P&S Seam Tape” for application procedures in colder temperatures.

3. When using **Peel & Stick Cured Cover Strip** to overlay Seam Fastening Plates or metal edging, etc., **Multipurpose Primer or LOW VOC Primer** must be used to clean the membrane and metal flanges.

B. Walls, Parapets, Curbs, Skylights, etc.

1. Use continuous deck membrane with Peel & Stick RPS (Reinforced Perimeter Strip) or Seam Fastening Plates along the angle change.
   
   a. When using Peel & Stick RPS, refer to Paragraph 3.05 G, Additional Membrane Securement, for attachment criteria.
   
   b. When Seam Fastening Plates are used to secure continuous deck membrane, use minimum 6” wide Peel & Stick Cured Cover Strip to overlay fasteners and plates.

2. When the use of continuous deck membrane for wall flashing is not feasible, a separate piece of cured EPDM membrane may be used.

3. Adhere flashing to the wall and terminate in accordance with the applicable WeatherBond Detail.

4. Use a “T” Joint Cover or 6” by 6” Peel & Stick Uncured Flashing with rounded corners to overlay vertical splices as shown on the applicable WeatherBond Detail.

5. Refer to applicable WeatherBond Details for various corner flashing options.

C. Flashing of other Penetrations, refer to Spec Supplement G-04-11 for Flashing Considerations and the applicable WeatherBond detail for specific requirements.

3.07 Roof Walkways

Walkways are to be specified at all traffic concentration points (i.e., roof hatches, access doors, rooftop ladders, etc.), and if regular maintenance (once a month or more) is necessary to service rooftop equipment. Refer to Spec Supplement G-05-11 “Roof Walkway Installations.”

3.08 Daily Seal

On phased roofing, when the completion of flashings and terminations is not possible by the end of each workday, provisions must be taken to temporarily close the membrane to prevent water infiltration. Refer to Spec Supplement G-06-11 “Daily Seal & Clean Up”.

3.09 Clean Up

A. **General**

1. Termination bars and surface mounted reglets must be specified to be installed directly to the wall surface.

2. WeatherBond recommends WeatherBond Metal Edging/Coping, Termination Bar or Drip Edge for membrane termination.

   **NOTE:** Refer to Tables in Section 1.05 for specific metal edge requirements for projects with Total System Warranties or those with extended peak gust wind speed coverage greater than 80 miles per hour.

3. Metal work by others, when specified, must be fastened to prevent the metal from pulling free or buckling and sealed to prevent moisture from entering the roofing system or building.

4. **On retrofit projects**, existing counter flashing, edging, expansion joint covers, copings, etc., shall not be reused unless investigated by the specifier to determine its compliance to WeatherBond’s current details.
# TABLE OF CONTENTS

## Mechanically Attached
- Membrane Securement – Option 1: WBRMA-2.0A
- Membrane Securement with Peel & Stick RPS – Option 2: WBRMA-2.0B
- EPDM Membrane Splice: WBRMA-2.1
- End Lap Splice: WBRMA-2.2
- P&S Seam Tape Splice Intersection: WBRMA-2.3
- Roof Drain with Sump: WBRMA-6.0
- Peel & Stick Pipe Seal: WBRMA-8.1
- Field Fabricated Pipe Seal: WBRMA-8.2
- Ridge Membrane Attachment: WBRMA-22.0

## Metal Edges and Gravel Stops
- WeatherBond Drip Edge Fascia: WBRC-1.1A
- Metal Bar Edge Termination: WBRC-1.3

## Membrane Splices
- EPDM Membrane Splices: WBRC-2.1A
- EPDM Membrane Splices- Projects with 90-mil Membrane or Warranties Greater than 15-Year: WBRC-2.1B
- P&S Seam Tape Splice Intersection: WBRC-2.2
- EPDM Membrane Splices at Angle Change: WBRC-2.3

## Expansion Joints
- Deck-to-Deck Expansion Joint: WBRC-3.1
- Deck-to-Wall Expansion Joint: WBRC-3.2
- Shear/Expansion Cover: WBRC-3.3

## Curb Flashing
- Curb Flashing: WBRC-5.1
- Peel & Stick Curb Wrap: WBRC-5.2
- New Self-Flashing Metal Curb: WBRC-5.3
- Self-Flashing Curb: WBRC-5.4

## Drains
- Roof Drain: WBRC-6.1
- WeatherBond Add-on Drain: WBRC-6.2
- WeatherBond Insert Drain: WBRC-6.3
- Insert Drain Through Deck: WBRC-6.4

## Pipe Flashing
- Pre-Molded Peel & Stick Pipe Seal: WBRC-8.1A
- Pre-Molded Peel & Stick Pipe Seal with 90-mil Membrane or 25 & 30 Year Warranties: WBRC-8.1B
- Field Fabricated Pipe Seal/ Structural Steel Tube Flashing: WBRC-8.2

MEMBRANE SECURITY - OPTION 1

REINFORCED EPDM UNLESS NOTED OTHERWISE

APPROVED SUBSTRATE

SEE NOTE(S)

MECHANICALLY ATTACHED EPDM WBRMA-2.0A
NOTES:

1. REFER TO WEATHERBOND SPECIFICATIONS FOR REQUIRED NUMBER OF PERIMETER SHEETS, SHEET WIDTH AND MEMBRANE FASTENING DENSITY.

2. END LAPS DO NOT REQUIRE MECHANICAL FASTENING AND SHALL BE SPliced USING EITHER 3” (76mm) OR 6” (152mm) WIDE P&S SEAM TAPE.
   REFER TO DETAIL WBRMA–2.2.

3. EPDM PRIMER MUST BE APPLIED TO THE BACK SIDE OF MEMBRANE SURFACE PRIOR TO ADHERING MEMBRANE TO PEEL & STICK RPS.

4. HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.
NOTES:

1. HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

2. PRIOR TO THE INSTALLATION OF SPLICE TAPE, APPLY EPDM PRIMER TO SPLICE AREAS.

3. FIELD APPLIED P&S SEAM TAPE IS TO BE OVERLAPPED A MINIMUM OF 1" (25mm) AT THE ENDS OF EACH CUT PIECE. APPLY LAP SEALANT AT TAPE OVERLAPS 2" (51mm) IN ALL DIRECTIONS AS SHOWN.

4. APPLY LAP SEALANT ALONG THE LEADING EDGE OF THE MEMBRANE SPLICE UNDER THE 6" X 6" (152 X 152mm) T-JOINT COVER, COVERING THE EXPOSED SPLICE TAPE 2" (51mm) IN ALL DIRECTIONS FROM THE SPLICE INTERSECTION.

5. END LAPS SHALL BE SPLICED USING EITHER 3" (76mm) OR 6" (152mm) WIDE P&S SEAM TAPE. REFER TO DETAIL WBRMA-2.2.

6. LAP SEALANT IS REQUIRED ON CUT EDGES OF REINFORCED EPDM MEMBRANE.
NOTES:

1. P&S SEAM TAPE IS TO BE OVERLAPPED A MINIMUM OF 1" (25mm) AT THE ENDS OF EACH CUT PIECE. APPLY LAP SEALANT AT TAPE OVERLAPS AS SHOWN ABOVE.

2. APPLY EPDM PRIMER TO THE MEMBRANE SURFACES PRIOR TO INSTALLING PEEL & STICK FLASHING.

3. LAP SEALANT IS REQUIRED ON CUT EDGES OF REINFORCED EPDM MEMBRANE.
POSITION MEMBRANE TO ALLOW AN APPROXIMATE 7" (178mm) OVERLAP ALONG THE LENGTH OF THE MEMBRANE & 3" (76mm) AT END LAPS. MARK THE BOTTOM SHEET WITH AN INDELIBLE MARKER 1/2" (13mm) FROM THE EDGE OF THE TOP SHEET AS SHOWN. THE PRE-MARKED LINE ON THE MEMBRANE EDGE CAN ALSO BE USED AS A GUIDE.

FOLD SHEETS BACK AS SHOWN. APPLY EPDM PRIMER TO THE SPlice AREA ON BOTH SURFACES AND ALLOW TO PROPERLY DRY. APPLY P&S SEAM TAPE WITH RELEASE FILM ALIGNED WITH MARKER LINE.

SPlice SHEET B TO SHEET A AND APPLY SECOND PIECE OF P&S SEAM TAPE BETWEEN SHEET B AND C. TRIM RELEASE FILM AS SHOWN.

SPlice SHEET C TO SHEET A AND B. PRESS TOP SHEET ONTO BOTTOM SHEET USING HAND PRESSURE TOWARDS THE OUTER EDGE OF THE SPlice AND ROLL THE SPlice AREA WITH A 2" (51mm) WIDE STEEL ROLLER.

NOTES:

1. THE USE OF LAP SEALANT ALONG ENTIRE SPlice EDGE IS OPTIONSAL EXCEPT AT CUT EDGES OF REINFORCED MEMBRANE AND TAPE OVERLAPS. REFER TO DETAIL WBRMA-2.1.

2. APPLY LAP SEALANT ALONG THE EDGE OF THE MEMBRANE SPlice (UNDER THE 6" x 6" T-JOINT COVER) COVERING THE EXPOSED SPlice TAPE 2" (51mm) IN EACH DIRECTION FROM THE SPlice INTERSECTION.
NOTES:

1. HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

2. ROOF DRAIN SIZE AND NUMBER OF DRAINS SHALL BE IN ACCORDANCE WITH THE LOCAL CODES.

3. THE HOLE IN THE MEMBRANE SHALL EXCEED THE DIAMETER OF THE DRAIN PIPE, BUT SHALL BE NO LESS THAN 1/2" (13mm) FROM THE ATTACHMENT POINTS OF THE DRAIN CLAMPING RING.

4. ALL BOLTS OR CLAMPS MUST BE IN PLACE TO PROVIDE CONSTANT COMPRESSION ON WATER CUT-OFF MASTIC.

5. REMOVE EXISTING LEAD, FLASHING MATERIAL & ENSURE THE DRAIN RING IS COMPLETELY CLEAN DOWN TO BARE METAL.

6. PRIOR TO INSTALLATION OF SPLICE TAPE, APPLY EPDM PRIMER TO SPLICE AREAS.
1. REMOVE ALL LEAD AND OTHER FLASHING BEFORE INSTALLING PIPE SEAL.

2. TEMPERATURE OF PIPE MUST NOT EXCEED 180°F (82°C).

3. PRE-MOLDED PIPE SEAL MUST HAVE INTACT RIB AT THE TOP EDGE REGARDLESS OF PIPE DIAMETER.

4. INSTALL A MINIMUM OF 4 SEAM FASTENING PLATES FOR PIPES WITH A DIAMETER UP TO 6" (152mm). ADDITIONAL SEAM FASTENING PLATES WILL BE REQUIRED FOR PIPES GREATER THAN 6" (152mm) IN DIAMETER AND SHALL BE SPACED 12" (305mm) ON CENTER MAXIMUM.

5. HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

6. EPDM PRIMER MUST BE APPLIED TO MEMBRANE SURFACE PRIOR TO APPLYING PEEL & STICK CURED COVER STRIP (OVER FASTENING PLATES) AND PEEL & STICK PIPE SEAL.

7. DECK FLANGES OF THE PEEL & STICK PIPE SEAL SHALL NOT BE OVERLAPPED, CUT OR APPLIED OVER ANY ANGLE CHANGE.

8. WHEN A FIELD SPLICING INTERSECTS A PIPE SEAL, APPLY LAP SEALANT ALONG THE EDGE OF THE MEMBRANE SPLICE COVERING THE EXPOSED SPICE TAPE 2" (51mm) IN EACH DIRECTION FROM THE SPLICE INTERSECTION & OVERLAY WITH A 6"x6" (152 X 152mm) T-JOINT COVER.

MECHANICALLY ATTACHED EPDM

WBRMA-8.2

REINFORCED EPDM UNLESS NOTED OTHERWISE

APPROVED SUBSTRATE

SEE NOTE(S)
NOTES:

1. RIDGE MEMBRANE ATTACHMENT IS ONLY REQUIRED WHEN ROOF SLOPE EXCEEDS 3” TO THE HORIZONTAL FOOT (75 mm/300 mm).

2. REINFORCED EPDM MEMBRANE SHALL BE INSTALLED PARALLEL WITH RIDGE LINE (WITH MEMBRANE CENTERED OVER THE RIDGE LINE) AS SHOWN.

3. FOR PROPER MEMBRANE ATTACHMENT AND SPLICING, REFER TO APPLICABLE WBRMA-2 DETAIL.

4. REFER TO WEATHERBOND SPECIFICATIONS FOR REQUIRED NUMBER OF PERIMETER SHEETS, SHEET WIDTH AND MEMBRANE FASTENING DENSITY.

5. HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

6. AS AN OPTION, 9” (229mm) WIDE PEEL & STICK RPS MAY BE USED BENEATH EPDM FIELD SHEETS FOR PERIMETER SECUREMENT.
CAUTION
DETAIL NOT FOR USE WHEN USING 90-MIL MEMBRANE. ACCEPTABLE EDGING SHALL CONFORM TO RBR COMMON DETAIL WBRC-1.3.

6" (152mm) WIDE PEEL & STICK CURED COVER STRIP IN CONJUNCTION WITH EPDM PRIMER

DRIP EDGE OR FASCIA (BY OTHERS)

WOOD NAILER (BY OTHERS)

1-1/2" (38mm) RING SHANK NAILS @ 6" (152mm) O.C. MAX.

NOTES:

1. DECK FLANGE MUST BE TOTALLY COVERED BY PEEL & STICK CURED COVER STRIP WITH MINIMUM 2" (51mm) COVERAGE PAST NAIL HEADS.

2. WOOD NAILER MUST EXTEND PAST TOTAL WIDTH OF METAL EDGE.

3. TO REMOVE FINISHING OILS, SCRUB METAL FLANGE WITH WEATHERED MEMBRANE CLEANER; ALLOW TO DRY PRIOR TO APPLYING PRIMER.

4. LAP SEALANT MUST BE APPLIED AT FLASHING OVERLAPS AND INTERSECTIONS WITH JOINTS IN METAL EDGING.

5. APPLY LAP SEALANT ALONG THE LEADING EDGE OF THE MEMBRANE SPLICE (UNDER THE 6"x6" T-JOINT COVER) COVERING THE EXPOSED SPLICE TAPE 2" (51mm) IN ALL DIRECTIONS FROM THE SPLICE INTERSECTION.

6. REFER TO APPLICABLE WEATHERBOND METAL EDGING INSTRUCTION MANUAL FOR STEP-BY-STEP INSTALLATION PROCEDURES.
NOTE:

1. FASTENING OF METAL TERMINATION BAR MUST PROVIDE CONSTANT COMPRESSION ON WATER CUT-OFF MASTIC.

2. ALLOW MEMBRANE SHEET TO EXTEND 1/2" (13mm) MINIMUM BELOW THE METAL TERMINATION BAR.
EPDM MEMBRANE SPLICES

**CAUTION**

REFER TO DETAIL WBRC-2.1B FOR WARRANTY PROJECTS USING 90-MIL MEMBRANE.

**PRE-APPLIED TAPE IN CONJUNCTION WITH EPDM PRIMER**

**NOTES:**

1. FIELD APPLIED P&S SEAM TAPE IS TO BE OVERLAPPED A MINIMUM OF 1” (25mm) AT THE ENDS OF EACH CUT PIECE. APPLY LAP SEALANT AT TAPE OVERLAPS 2” (51mm) IN ALL DIRECTIONS AS SHOWN.

2. APPLY LAP SEALANT ALONG THE LEADING EDGE OF THE MEMBRANE SPLICE UNDER THE 6”X6” (152mm X 152mm) T-JOINT COVER, COVERING THE EXPOSED SPLICE TAPE 2” (51mm) IN ALL DIRECTIONS FROM THE SPLICE INTERSECTION.

3. 6” (152mm) WIDE PEEL & STICK UNCURED EPDM FLASHING, IN CONJUNCTION WITH EPDM PRIMER, MAY ALSO BE CENTERED OVER THE INTERSECTING POINT OF THE LEADING EDGES OF THE FIELD SPLICE INTERSECTION.

4. LAP SEALANT IS REQUIRED ON CUT EDGES OF REINFORCED EPDM MEMBRANE.
NOTES:

1. PROJECTS WITH 90-MIL EPDM MEMBRANE, TAPE SPLICES MAY BE A MINIMUM 6” (152mm) WIDE PRE-APPLIED TAPE. IN ADDITION, AND IN LIEU OF THE CONTINUOUS CURED COVERSTRIP, ALL SPLICE INTERSECTIONS MUST BE OVERLAIĐ WITH TWO LAYERS OF PEEL & STICK UNCURED EPDM FLASHING. APPLY LAP SEALANT ALONG THE LEADING EDGE OF THE MEMBRANE SPLICE COVERING 2” (51mm) IN ALL DIRECTIONS FROM THE SPLICE INTERSECTION AND OVERLAY WITH A 6”X6” (152mm X 152mm) T-JOINT COVER A SECOND LAYER OF 12”X12” (305mm X 305mm) PEEL & STICK UNCURED EPDM FLASHING IS REQUIRED. BOTH LAYERS SHALL BE CENTERED OVER THE SPLICE INTERSECTION AND SEALED WITH CONTINUOUS LAP SEALANT.
1. Position membrane to allow an approximate 3" (76mm) overlap. Mark the bottom sheet with an indelible marker 1/2" (13mm) from the edge of the top sheet as shown. The pre-marked line on the membrane edge can also be used as a guide.

2. Fold sheets back as shown. Apply EPDM primer to the splice area on both surfaces and allow to properly dry. Apply P&S seam tape with release film aligned with marker line.

4. Lap sealant applied along membrane edge. Splice sheet C to sheet A and B, press top sheet onto bottom sheet using hand pressure towards the outer edge of the splice and roll the splice area with a 2" (51mm) wide steel roller.

5. Peel & stick T-joint cover in conjunction with EPDM primer. Apply peel & stick T-joint cover or 6" (152mm) wide section of peel & stick uncured EPDM flashing centered over the intersecting point of the leading edges of the field splice intersection as shown.

NOTES:

1. The use of lap sealant along entire splice edge is optional, except at cut edges of reinforced membrane and tape overlaps. Refer to DETAIL WBRC-2.1A.

2. Apply lap sealant along the edge of the membrane splice under the 6"x6" (152mm x 152mm) T-joint cover, covering the exposed splice tape 2" (51mm) in each direction from the splice intersection.

3. Refer to DETAIL WBRC-2.1B for projects using 90-mil membrane.
NOTES:

1. APPLY LAP SEALANT ALONG THE LEADING EDGE OF THE MEMBRANE SPlice (UNDER THE PEEL & STICK UNcURED EPDM FLASHING) COVERING THE EXPOSED SPlice TAPE APPROXIMATELY 2” (51mn) BEYOND THE SPlice EDGE.

2. PEEL & STICK T-JOINT COVER OR 6” (152mm) WIDE PEEL & STICK FLASHING, IN CONJUNCTION WITH EPDM PRIMER, MUST BE CENTERED OVER FIELD SPICES AT THE ANGLE CHANGE. PROJECTS USING 90–MIL MEMBRANE REQUIRE FIELD SPICES TO BE OVERLAIEd WITH TWO LAYERS OF PEEL & STICK UNcURED EPDM FLASHING. THE BOTTOM LAYER SHALL BE 6” (152mm) WIDE COVERED WITH A 12” WIDE TOP LAYER (305mm). BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT.
NOTES:

1. FOR EXPANSION JOINT INTERSECTIONS AND INTERSECTIONS BETWEEN EXPANSION JOINTS TO WALL OR EDGING, USE TWO LAYERS OF PEEL & STICK UNCURED EPDM FLASHING WITH SECOND LAYER 3" (76mm) LARGER THAN PREVIOUS LAYER IN ALL DIRECTIONS.

2. WIDTH OF JOINT SHALL BE A MINIMUM OF 3/4" (19mm) AND SHALL NOT EXCEED 3" (76mm) WHEN WEATHERBOND EXPANSION JOINT SUPPORT IS USED.

3. ON MECHANICALLY ATTACHED SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

4. EPDM PRIMER MUST BE APPLIED TO BACK SIDE OF DECK MEMBRANE PRIOR TO COMPLETING SPLICE TO PEEL & STICK RPS.
NOTES:

2. WIDTH OF JOINT SHALL BE A MINIMUM OF 3/4" (19mm) AND SHALL NOT EXCEED 2" (51mm) WHEN WEATHERBOND EXPANSION JOINT SUPPORT IS USED.

3. ALL VERTICAL FIELD SPLICES AT THE BASE OF A WALL OR CURB MUST BE OVERLAID WITH A PEEL & STICK T-JOINT COVER OR A 6"X6" (152mm X 152mm) SECTION OF PEEL & STICK UNCURED EPDM FLASHING CENTERED OVER THE FIELD SPlice. PROJECTS USING 90–MIL MEMBRANE, ALL VERTICAL SPLICES MUST BE OVERLAID WITH A T–JOINT COVER AND COVERED WITH A 12"X12" (305mm x 305mm) PEEL & STICK UNCURED EPDM FLASHING PIECE. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT. REFER TO DETAIL WBRC–2.3.

4. ON MECHANICALLY ATTACHED SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

5. EPDM PRIMER MUST BE APPLIED TO BACK SIDE OF DECK MEMBRANE PRIOR TO COMPLETING SPLICE TO PEEL & STICK RPS.
NOTES:

1. PEEL & STICK RPS MAY BE INSTALLED INTO THE STRUCTURAL DECK. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

2. ALL VERTICAL FIELD SPLICES AT THE BASE OF A WALL OR CURB MUST BE OVERLAI D WITH A PEEL & STICK T-JOINT COVER OR A 6"X6" (152mm X 152mm) SECTION OF PEEL & STICK UNCURED EPDM FLASHING CENTERED OVER THE FIELD SPlice. PROJECTS USING 90–MIL MEMBRANE, ALL VERTICAL SPLICES MUST BE OVERLAI D WITH A T-JOINT COVER AND COVERED WITH A 12"X12" (305mm X 305mm) PEEL & STICK UNCURED EPDM FLASHING PIECE. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT. REFER TO DETAIL WBRC–2.3.

3. EPDM PRIMER MUST BE APPLIED TO BACK SIDE OF DECK MEMBRANE PRIOR TO COMPLETING SPLICE TO PEEL & STICK RPS.

4. WHEN MECHANICAL FASTENERS ARE USED TO PENETRATE THE METAL COUNTER–FLASHING, USE EPDM WASHERS, APPLY WATER CUT–OFF MASTIC UNDER THE COUNTER–FLASHING OR CAULK THE FASTENER HEADS.

5. WHEN THE USE OF PEEL & STICK RPS AND CONTINUOUS MEMBRANE IS NOT FEASIBLE, ACCEPTABLE FLASHING SHALL CONFORM TO DETAIL WBRC–12.3.
FOR PROJECTS USING 90-MIL MEMBRANE, REFER TO DETAIL WBRC-15A FOR REQUIRED CORNER ENHANCEMENTS.

MAXIMUM 12” (305mm) O.C. SPACING

SHEET METAL FLASHING (BY OTHERS)

BONDING ADHESIVE

EPDM MEMBRANE FLASHING

MIN. 3” (76mm) WIDE P&S SEAM TAPE IN CONJUNCTION WITH EPDM PRIMER

WEATHERBOND FASTENER & SEAM FASTENING PLATE, MAX. 12” (305mm) O.C.

CAUTION

NOTES:

1. IF THE VERTICAL SPLICE ON THE CURB FLASHING IS NOT LOCATED AT THE CORNER, 6” (152mm) WIDE PEEL & STICK UNCURED EPDM OR T-JOINT FLASHING, IN CONJUNCTION WITH EPDM PRIMER, MUST BE CENTERED OVER FIELD SPLICE AT ANGLE CHANGE.

2. LAP SEALANT IS REQUIRED ON CUT-EDGES OF REINFORCED MEMBRANE.

3. SEAM FASTENING PLATES/FASTENERS MAY BE INSTALLED INTO THE STRUCTURAL DECK.

4. WHEN SEAM FASTENING PLATES/FASTENERS ARE INSTALLED HORIZONTALLY, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED FOR MECHANICALLY-ATTACHED ROOFING SYSTEMS OVER STEEL DECKS.

5. WHEN MECHANICAL FASTENERS ARE USED TO PENETRATE THE METAL COUNTER—FLASHING, USE EPDM WASHERS, APPLY WATER CUT-OFF MASTIC UNDER THE COUNTER—FLASHING OR CAULK THE FASTENER HEADS.
FOR PROJECTS USING 90--MIL MEMBRANE, REFER TO DETAIL WBRC-15.8 FOR REQUIRED CORNER ENHANCEMENTS.

NOTES:

1. ON MECHANICALLY ATTACHED ROOFING SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

2. SEAM FASTENING PLATES/FASTENERS MAY BE INSTALLED INTO THE VERTICAL SUBSTRATE.

3. IF THE VERTICAL SPLICING ON THE CURB FLASHING IS NOT LOCATED AT THE CORNER, 6" (152mm) WIDE PEEL & STICK UNCURED EPDM OR T-JOINT FLASHING, IN CONJUNCTION WITH EPDM PRIMER, MUST BE CENTERED OVER FIELD SPLICING AT ANGLE CHANGE.

4. PRIOR TO THE INSTALLATION OF PEEL & STICK CURB WRAP, APPLY EPDM PRIMER TO SPLICING AREA.

5. WHEN MECHANICAL FASTENERS ARE USED TO PENETRATE THE METAL COUNTER--FLASHING, USE EPDM WASHERS, APPLY WATER CUT--OFF MASTIC UNDER THE COUNTER--FLASHING OR CAULK THE FASTENER HEADS.
NEW SELF-FLASHING METAL CURB WITH CORNERS WELDED WATERTIGHT (BY OTHERS)

WATER CUT-OFF MASTIC

MINIMUM 9" (229mm) WIDE PEEL & STICK CURED COVER STRIP IN CONJUNCTION WITH EPDM PRIMER

WOOD NAILER (BY OTHERS)

NOTES:

1. WOOD NAILER MUST EXTEND PAST TOTAL WIDTH OF METAL CURB DECK FLANGE.

2. CONSULT THE RESPECTIVE MANUFACTURER OF THE SELF-FLASHING METAL CURB FOR PROPER SECUREMENT.

3. WATER CUT-OFF MASTIC MUST BE HELD UNDER CONSTANT COMPRESSION.

4. 7"X9" (178mm X 229mm) PEEL & STICK CORNERS CANNOT BE INSTALLED ON THIS DETAIL DUE TO INCOMPLETE COVERAGE OF THE METAL FLANGE AT CORNERS. REFER TO DETAIL WBRC-15.6.

CURED EPDM MEMBRANE

FLASH ALL OUTSIDE CORNERS PER DETAIL WBRC–15.6.
NOTES:

1. ROOF DRAIN SIZE AND NUMBER OF DRAINS SHALL BE IN ACCORDANCE WITH THE LOCAL CODES.

2. ALL BOLTS OR CLAMPS MUST BE IN PLACE TO PROVIDE CONSTANT COMPRESSION ON WATER CUT-OFF MASTIC.

3. THE HOLE IN THE MEMBRANE SHALL EXCEED THE DIAMETER OF THE DRAIN PIPE, BUT SHALL BE NO LESS THAN 1/2" (13mm) FROM THE ATTACHMENT POINTS OF THE DRAIN CLAMPING RING.

4. REMOVE EXISTING LEAD, FLASHING MATERIAL & ENSURE THE DRAIN RING IS COMPLETELY CLEAN DOWN TO BARE METAL.

5. FIELD SPLICES MUST BE LOCATED AT LEAST 6" (152mm) OUTSIDE THE DRAIN SUMP.

6. INSULATION TAPER SHALL NOT BE GREATER THAN 6" (152mm) IN 12" (305mm) HORIZONTAL.
NOTES:

1. ROOF DRAIN SIZE AND NUMBER OF DRAINS SHALL BE IN ACCORDANCE WITH THE LOCAL CODES.

2. ALL BOLTS OR CLAMPS MUST BE IN PLACE TO PROVIDE CONSTANT COMPRESSION ON WATER CUT-OFF MASTIC.

3. THE HOLE IN THE MEMBRANE SHALL EXCEED THE DIAMETER OF THE DRAIN PIPE, BUT SHALL BE NO LESS THAN 1/2” (13mm) FROM THE ATTACHMENT POINTS OF THE DRAIN CLAMPING RING.

4. FIELD SPLICES MUST BE LOCATED AT LEAST 6” (152mm) OUTSIDE THE DRAIN SUMP.

5. INSULATION TAPER SHALL NOT BE GREATER THAN 6” (152mm) IN 12” (305mm) HORIZONTAL.
NOTES:

1. ROOF DRAIN SIZE AND NUMBER OF DRAINS SHALL BE IN ACCORDANCE WITH THE LOCAL CODES.

2. ALL BOLTS OR CLAMPS MUST BE IN PLACE TO PROVIDE CONSTANT COMPRESSION ON WATER CUT-OFF MASTIC.

3. THE HOLE IN THE MEMBRANE SHALL EXCEED THE DIAMETER OF THE DRAIN PIPE, BUT SHALL BE NO LESS THAN 1/2" (13mm) FROM THE ATTACHMENT POINTS OF THE DRAIN CLAMPING RING.

4. FIELD SPLICES MUST BE LOCATED AT LEAST 6" (152mm) OUTSIDE THE DRAIN SUMP.

5. INSULATION TAPER SHALL NOT BE GREATER THAN 6" (152mm) IN 12" (305mm) HORIZONTAL.
NOTES:

1. WATER CUT-OFF MASTIC MUST BE UNDER CONSTANT COMPRESSION.

2. APPLY EPDM PRIMER TO METAL FLANGE AND MEMBRANE SURFACE PRIOR TO INSTALLING PEEL & STICK FLASHING

3. PEEL & STICK CURED COVER STRIP FLASHING MUST OVERLAP DECK MEMBRANE MINIMUM 3" (76mm).

4. WOOD NAILER MUST EXTEND PAST TOTAL WIDTH OF DECK FLANGE.

5. DRAIN INSERT FLANGE MUST BE TOTALLY COVERED BY PEEL & STICK CURED COVER STRIP WITH MINIMUM 2" (51mm) COVERAGE PAST NAIL HEADS.

6. CONSULT SPECIFIER OR APPLICABLE CODES FOR ADEQUATE DRAINAGE STRAINER TO AVOID PONDING WATER. DO NOT RESTRICT WATER FLOW.
NOTE:

1. REMOVE ALL LEAD AND OTHER FLASHING BEFORE INSTALLING PEEL & STICK PIPE SEAL.

2. TEMPERATURE OF PIPE PENETRATION MUST NOT EXCEED 180°F (82°C).

3. PRE-MOLDED PIPE SEAL MUST HAVE INTACT RIB AT THE TOP EDGE REGARDLESS OF PIPE DIAMETER.

4. EPDM PRIMER MUST BE APPLIED TO MEMBRANE SURFACE PRIOR TO APPLYING PEEL & STICK PIPE SEAL.

5. DECK FLANGES OF THE PEEL & STICK PIPE SEAL SHALL NOT BE OVERLAPPED, CUT OR APPLIED OVER ANY ANGLE CHANGE.

6. WHEN A FIELD SPLICE INTERSECTS A PIPE SEAL, APPLY LAP SEALANT ALONG THE EDGE OF THE MEMBRANE SPLICE COVERING THE EXPOSED SPLICE TAPE 2" (51mm) IN EACH DIRECTION FROM THE SPLICE INTERSECTION & OVERLAY WITH A 6"X6" (152mm X 152mm) T-JOINT COVER.

7. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, ADDITIONAL MEMBRANE SECUREMENT IS REQUIRED. REFER TO DETAIL WBRC-8.1.
NOTES:

1. REMOVE ALL LEAD AND OTHER FLASHING BEFORE INSTALLING PEEL & STICK PIPE SEAL.

2. PIPE SEAL MUST HAVE INTACT RIB AT TOP EDGE, REGARDLESS OF PIPE DIAMETER.

3. DECK FLANGES OF THE MOLDED PIPE SEAL SHALL NOT BE OVERLAPPED, CUT OR APPLIED OVER ANY ANGLE CHANGE.

4. AT THE CUT IN THE FIELD MEMBRANE, 60-MIL THICK CURED EPDM FLASHING OVERLAY MUST EXTEND 3" (76mm) BEYOND THE MOLDED PIPE FLASHING FLANGE ON 3 SIDES AND WITHIN 1" (25mm) OF THE EDGE OF THE FIELD MEMBRANE, AS SHOWN.

5. CENTER 9" (229mm) WIDE PEEL & STICK UNCURED EPDM FLASHING OVER THE MEMBRANE SPLICE EDGE AND EXTEND 3" (76mm) BEYOND THE MEMBRANE OVERLAY, AS SHOWN.

6. SEAL ALL EDGES WITH CONTINUOUS LAP SEALANT.
NOTES:

1. REMOVE ALL LEAD AND OTHER FLASHING BEFORE INSTALLING FIELD-FABRICATED FLASHING.

2. TEMPERATURE OF PIPE PENETRATION MUST NOT EXCEED 180°F (82°C).

3. PIPE FLASHING MAY BE USED WITH SQUARE OR RECTANGULAR STRUCTURAL TUBING WITH ROUNDED CORNERS.

4. FOR STRUCTURAL STEEL TUBING GREATER THAN 12” (305mm) ACROSS, USE DETAIL(S) WBRC-5.

5. EPDM PRIMER MUST BE APPLIED TO THE MATING SURFACES PRIOR TO APPLYING PEEL & STICK UNCURED EPDM FLASHING.

6. IN COLDER TEMPERATURES, A HEAT GUN MUST BE USED WHEN FORMING PEEL & STICK UNCURED EPDM FLASHING.

7. ON MECHANICALLY ATTACHED ROOFING SYSTEMS, ADDITIONAL MEMBRANE SECUREMENT IS REQUIRED. REFER TO DETAIL WBRMA--8.2.

8. MEMBRANE SECUREMENT IS REQUIRED AROUND ALL ROUND PIPE PENETRATIONS GREATER THAN 18” (457mm) IN DIAMETER.
NOTES:

1. REMOVE ALL LEAD AND OTHER FLASHING BEFORE INSTALLING FIELD-FABRICATED PIPE SEAL.

2. TEMPERATURE OF PENETRATION MUST NOT EXCEED 180°F (82°C).

3. WOOD NAILERS MUST EXTEND PAST TOTAL WIDTH OF METAL FLANGE.

4. EPDM PRIMER MUST BE APPLIED TO THE MATING SURFACES PRIOR TO APPLYING PEEL & STICK UNCURED EPDM FLASHING.

5. IN COLDER TEMPERATURES, A HEAT GUN MUST BE USED WHEN FORMING PEEL & STICK UNCURED EPDM FLASHING.
NOTES:

1. REMOVE ALL LEAD AND OTHER FLASHING BEFORE INSTALLING FIELD FABRICATED PIPE SEAL.

2. TEMPERATURE OF METAL COLLAR MUST NOT EXCEED 180°F (82°C).

3. EPDM PRIMER MUST BE APPLIED TO THE MATING SURFACES PRIOR TO APPLYING PEEL & STICK UNCURED EPDM FLASHING.

4. IN COLDER TEMPERATURES, A HEAT GUN MUST BE USED WHEN FORMING PEEL & STICK UNCURED EPDM FLASHING.
9.1 MECHANICAL TERMINATION WITH COUNTER FLASHING

NOTES:
1. APPLY ON HARD SMOOTH SURFACE ONLY; NOT FOR USE ON EXPOSED WOOD.
2. DO NOT WRAP TERMINATION BAR AROUND CORNERS.

MIN. 1/4" (6mm)
MAX. 1/2" (13mm)

9.2 SHEET METAL COPING (BY OTHERS)

NOTES:
1. FOR WEATHERBOND PRO COPING, REFER TO INSTALLATION INSTRUCTIONS PUBLISHED SEPARATELY.
2. MEMBRANE MUST BE EXTENDED TO CORNERS TO PROVIDE COMPLETE COVERAGE OF THE TOP WALL SURFACE.

9.3 COUNTER FLASHING TERMINATION

NOTES:
1. WHEN MECHANICAL FASTENERS ARE USED TO PENETRATE THE METAL COUNTER–FLASHING, USE EPDM WASHERS, APPLY WATER CUT–OFF MASTIC UNDER THE COUNTER–FLASHING OR CAULK THE FASTENER HEADS.
2. DETAIL NOT FOR USE ON WARRANTY PROJECTS EXCEEDING 10–YEARS.

BONDING ADHESIVE
EPDM MEMBRANE
APPROVED SUBSTRATE
SEE NOTE(S)
WATER CUT–OFF MASTIC– MUST BE HELD UNDER CONSTANT COMPRESSION.
**9.4 MECHANICAL TERMINATION**

- Universal Single-Ply Sealant or Sealant (by Others)
- Term Bar Nail-In
- Termination Bar

**NOTES:**
1. Apply on hard smooth surface only; not for use on exposed wood.
2. Do not wrap compression termination bar around corners.

**9.5 MECHANICAL TERMINATION AT VERTICAL JOINT**

- Universal Single-Ply Sealant or Sealant (by Others)
- Termination Bar
- Metal Counter Flashing (by Others)

**NOTES:**
1. Apply on hard smooth surface only.
2. Do not wrap compression termination bar around corners.
3. Vertical joints in the pre-cast panel as well as all gaps at the junction of the tilt-up panel and roof deck must be fully sealed to prevent air infiltration.

**9.6 COPING STONE TERMINATION**

- Coping Stone & Anchors (by Others)
- Water Cut-Off Mastic around Dowel or Anchors

**NOTES:**
- Water Cut-Off Mastic—must be held under constant compression.

---

RBR ROOFING SYSTEM

WBRC-9.0B
NOTES:

1. FOR CORNERS AND RPS APPLICATION REFER TO DETAILS WBRC-15.1 OR WBRC-15.2.

2. REFER TO SPECIAL CONDITION SPEC. SUPPLEMENTS G-01-11 OR G-07-11:
   2.1. TO BLOCK INDOOR AIR INFILTRATION AND HUMIDITY AT THE JUNCTION (G-01-11).
   2.2. WHERE ROOF SYSTEM IS DESIGNED WITH A VAPOR RETARDER (G-07-11).

3. 6" (152mm) WIDE PEEL & STICK UNCURED EPDM FLASHING, IN CONJUNCTION WITH EPDM PRIMER,
    MAY ALSO BE CENTERED OVER FIELD SPLICE AT ANGLE CHANGE.

4. EPDM PRIMER MUST BE APPLIED TO BACK SIDE OF DECK MEMBRANE PRIOR TO COMPLETING
   SPLICE TO PEEL & STICK RPS.

5. PROJECTS USING 90-MIL MEMBRANE, ALL VERTICAL SPLICES AT THE BASE OF A WALL AND SPLICE
   INTERSECTIONS MUST BE OVERLAID WITH TWO LAYERS OF PEEL & STICK UNCURED EPDM FLASHING.
   THE BOTTOM LAYER SHALL BE 6" (152mm) WIDE COVERED WITH A 12" (305mm) WIDE PEEL & STICK
   UNCURED EPDM FLASHING PIECE. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS
   LAP SEALANT. REFER TO DETAIL WBRC-2.3.
1. FOR CORNERS AND RPS APPLICATION REFER TO DETAILS WBRC-15.1 OR WBRC-15.2.

2. REFER TO SPECIAL CONDITION SPEC. SUPPLEMENTS G-01-11 OR G-07-11:
   2.1. TO BLOCK INDOOR AIR INFILTRATION AND HUMIDITY AT THE JUNCTION (G-01-11).
   2.2. WHERE ROOF SYSTEM IS DESIGNED WITH A VAPOR RETARDER (G-07-11).

3. 6” (152mm) WIDE PEEL & STICK UNCURED EPDM FLASHING, IN CONJUNCTION WITH EPDM PRIMER, MAY ALSO BE CENTERED OVER FIELD SPLICE AT ANGLE CHANGE.

4. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

5. PROJECTS USING 90-MIL MEMBRANE, ALL VERTICAL SPLICES AT THE BASE OF A WALL AND SPLICE INTERSECTIONS MUST BE OVERLAIRED WITH TWO LAYERS OF PEEL & STICK UNCURED EPDM FLASHING. THE BOTTOM LAYER SHALL BE 6” (152mm) WIDE COVERED WITH A 12” (305mm) WIDE PEEL & STICK UNCURED EPDM FLASHING PIECE. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT. REFER TO DETAIL WBRC-2.3.

6. EPDM PRIMER MUST BE APPLIED TO BACK SIDE OF DECK MEMBRANE PRIOR TO COMPLETING SPLICE TO PEEL & STICK RPS.
NOTES:

1. PRIOR TO THE INSTALLATION OF P&S SEAM TAPE AND PEEL & STICK FLASHING APPLY EPDM PRIMER TO SPLICE AREAS.

2. REFER TO SPECIAL CONDITION SPEC. SUPPLEMENTS G-01-11 OR G-07-11;
   2.1. TO BLOCK INDOOR AIR INFILTRATION AND HUMIDITY AT THE JUNCTION (G-01-11).
   2.2. WHERE ROOF SYSTEM IS DESIGNED WITH A VAPOR RETARDER (G-07-11).

3. SEAM FASTENING PLATE/FASTENER MAY BE INSTALLED INTO THE STRUCTURAL DECK. HPWx FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED FOR MECHANICALLY-ATTACHED ROOFING SYSTEMS OVER STEEL DECKS.

4. PROJECTS USING 90-MIL MEMBRANE, ALL VERTICAL SPLICES AT THE BASE OF A WALL AND SPLICE INTERSECTIONS MUST BE OVERLAID WITH TWO LAYERS OF PEEL & STICK UNCURED EPDM FLASHING. THE BOTTOM LAYER SHALL BE 6” (152mm) WIDE COVERED WITH A 12” (305mm) WIDE PEEL & STICK UNCURED EPDM FLASHING PIECE. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT. REFER TO DETAIL WBRC-2.3.

5. LAP SEALANT IS REQUIRED ON CUT EDGES OF REINFORCED MEMBRANE.
BUILT-UP ROOFING TIE-IN OVER STEEL ROOF DECK

NOTE:

1. REMOVE ALL GRAVEL AT TIE-IN.

2. DRILL A 3/8" (10mm) DIAMETER WEEP HOLE ON THE BOTTOM FLUTES OF THE STEEL DECK ALONG THE PERIMETER TO THE TIE-IN 6" (152mm) MINIMUM TO 12" (305mm) MAXIMUM FROM THE SEAM FASTENING PLATE.

3. ON MECHANICALLY ATTACHED SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

4. IF WATER PONDS OR FLOWS OVER TIE-IN FROM BUR SURFACE, WEATHERBOND ROOFING SYSTEM MUST BE TOTALLY ISOLATED; SEE DETAIL WBRC-13.2.

5. ON BALLASTED SYSTEMS, USE CONCRETE PAVERS TO PREVENT BALLAST MIGRATION.
NOTE:

1. REMOVE ALL GRAVEL AT TIE-IN.

2. ON MECHANICALLY ATTACHED SYSTEMS, CD-10 OR MP 14-10 FASTENERS AND SEAM FASTENING PLATES ARE REQUIRED OVER CONCRETE DECKS.

3. WATER CUT-OFF MUST BE UNDER CONSTANT COMPRESSION.

4. WEATHERBOND IS NOT RESPONSIBLE FOR DAMAGE TO THE BUILT-UP ROOF OR STRUCTURAL DECK RESULTING FROM PONDED WATER; THIS DETAIL APPLIES TO RE-ROOFING WHEN A TEAR-OFF IS NOT SPECIFIED AND WAS DESIGNED TO PREVENT MIGRATION OF WATER WITHIN THE ROOFING SYSTEM.

5. ON BALLASTED SYSTEMS, USE CONCRETE PAVERS TO PREVENT BALLAST MIGRATION.

NOTES:

1. PRIOR TO SPLICING, CLEAN EXISTING EPDM MEMBRANE BY SCRUBBING THE SPLICE AREA WITH WEATHERED MEMBRANE CLEANER AND ALLOW TO DRY.

2. CONTACT MANUFACTURER OF EXISTING EPDM MEMBRANE ROOFING SYSTEM TO VERIFY ACCEPTANCE OF TIE-IN AND TO NOT VOID EXISTING WARRANTY.

3. FOR EXISTING BALLASTED SYSTEMS BY OTHERS, CONSULT RESPECTIVE MANUFACTURER FOR ACCEPTABLE GRAVEL CONTAINMENT TO PREVENT GRAVEL MIGRATION.

4. DRILL A 3/8" (10mm) DIAMETER WEEP HOLE ON ALL BOTTOM FLUTES OF THE STEEL DECK ALONG THE PERIMETER OF THE TIE-IN 6" (152mm) MINIMUM TO 12" (305mm) MAXIMUM FROM THE SEAM FASTENING PLATE.

5. ON MECHANICALLY ATTACHED SYSTEMS, HPWX FASTENERS AND POLYMER SEAM PLATES ARE REQUIRED OVER STEEL DECKS.

6. ALL SPLICE INTERSECTIONS MUST BE OVERLAID WITH PEEL & STICK T-JOINT COVERS. REFER TO DETAIL WBRC-2.1A OR DETAIL WBRC-2.1B FOR WARRANTY PROJECTS USING 90-MIL EPDM MEMBRANE.
NOTES:

1. PRIOR TO SPlicing, CLEAN EXISTING EPDM MEMBRANE BY SCRUBBING THE SPLICE AREA WITH WEATHERED MEMBRANE CLEANER; ALLOW TO DRY.

2. CONTACT MANUFACTURER OF EXISTING EPDM MEMBRANE ROOFING SYSTEM TO VERIFY ACCEPTANCE OF TIE-IN AND TO NOT VOID EXISTING WARRANTY.

3. ON EXISTING BALLASTED ROOFING SYSTEMS, CONSULT RESPECTIVE MANUFACTURER FOR ACCEPTABLE GRAVEL CONTAINMENT TO PREVENT GRAVEL MIGRATION.

4. WATER CUT-OFF MASTIC MUST BE HELD UNDER CONSTANT COMPRESSION.

5. WHEN RE-ROOFING OVER PRE-CAST CONCRETE, APPLY LIBERAL BEAD OF WATER CUT-OFF MASTIC IN THE JOINTS TO PREVENT MOISTURE MIGRATION.

6. ON MECHANICALLY ATTACHED SYSTEMS, APPROVED CONCRETE FASTENERS AND SEAM FASTENING PLATES ARE REQUIRED OVER CONCRETE DECKS.

7. ALL SPLICE INTERSECTIONS MUST BE OVERLAIDED WITH PEEL & STICK T-JOINT COVERS. REFER TO DETAIL WBRC-2.1A OR DETAIL WBRC-2.1B FOR WARRANTY PROJECTS USING 90-MIL EPDM MEMBRANE.
NOTES:

1. REGARDLESS OF MEMBRANE EXPOSURE EXTEND MEMBRANE UNDER FIRST 3 COURSES.

2. WEATHERBOND’S WARRANTY IS LIMITED TO EXPOSED PORTION OF ROOF MEMBRANE.
NOTES:

1. ALL SPLICE INTERSECTIONS MUST BE OVERLAID WITH PEEL & STICK T-JOINT COVERS. REFER TO DETAIL WBRC-2.1A OR DETAIL WBRC-2.1B FOR WARRANTY PROJECTS USING 90-MIL EPDM MEMBRANE.

1. Peel & stick uncured EPDM flashing inside / outside corners must be used.

2. As an option, 6” (152mm) wide peel & stick RPS may be fastened into the vertical substrate, see detail WBRC-12.1.

3. Cut 45° and apply EPDM primer/P&S seam tape.

4. Fold membrane under.

5. Bond.

6. 3” (76mm) min. splice.

7. 3” (76mm) min. splice.

8. Pig ear on opposite wall.
1. AS AN OPTION, 6" (152mm) WIDE PEEL & STICK RPS MAY BE FASTENED INTO THE VERTICAL SUBSTRATE, SEE DETAIL WBRC-12.1.

FORM PIG EAR WITH CONTINUOUS MEMBRANE AT CORNER AS SHOWN

CUT & REMOVE EXCESSIVE MEMBRANE

6" (152mm) WIDE PEEL & STICK UNCURED EPDM FLASHING IN CONJUNCTION WITH EPDM PRIMER
1. **EPDM PRIMER**

   CLEAN DRY SPLICE AREA OF THE EPDM MEMBRANE BY SCRUBBING WITH EPDM PRIMER.

2. **CLEAR POLY RELEASE FILM**

   REMOVE POLY RELEASE FILM AND PLACE ON FLASHING SIDE TO PREVENT STICKING

   **STEP A**

   **FOLD PEEL & STICK CORNER LENGTHWISE AND PROCEED TO FOLD QUARTERLY AS SHOWN IN STEP B**

   **STEP B**

3. **PLACE QUARTER SECTION ONTO DECK WITH LONG FOLDED SIDE FACING THE WALL. REMOVE REMAINING RELEASE PAPER. PRESS FIRMLY AND PROCEED WITH SECOND QUARTER GOING UP THE VERTICAL WALL BY PRESSING FIRMLY INTO CORNER.**

4. **P&S SEAM TAPE/PRIMER**

   FORM A PIG EAR. APPLY PRIMER/P&S SEAM TAPE TO THE PIG EAR AND ADHERE TO THE WALL.

5. **ROLL WITH TWO INCH WIDE ROLLER.**

   **ANY WBRC-9 TERMINATION**

**NOTES:**

1. FOR PROJECTS USING 90-MIL MEMBRANE, ALL INSIDE CORNERS MUST BE OVERLAID WITH TWO LAYERS OF PEEL & STICK FLASHING. THE BOTTOM LAYER SHALL BE A 7"X9" (178mm X 229mm) PEEL & STICK PRE-CUT INSIDE/OUTSIDE CORNER OR A 6"X6" (152mm X 152mm) PEEL & STICK UNCURED EPDM FLASHING PIECE COVERED WITH A 12"X12" TOP LAYER (305mm X 305mm) OF PEEL & STICK UNCURED EPDM FLASHING. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT.

2. EPDM PRIMER MUST BE APPLIED TO ALL SPLICE AREAS AND FOR EACH LAYER OF PEEL & STICK FLASHING.
FOR PROJECTS USING 90-MIL MEMBRANE, REFER TO DETAIL WBRC-15.4B FOR REQUIRED FLASHING ENHANCEMENTS.

NOTES:

1. APPLY EPDM PRIMER TO THE MEMBRANE SURFACES PRIOR TO INSTALLING PEEL & STICK FLASHING.

2. IN COLDER TEMPERATURES, A HEAT GUN MUST BE USED WHEN FORMING PEEL & STICK UNCURED EPDM FLASHING.
NOTES:

1. FOR PROJECTS USING 90-MIL MEMBRANE, ALL INSIDE CORNERS MUST BE OVERLAID WITH TWO LAYERS OF PEEL & STICK FLASHING. THE BOTTOM LAYER SHALL BE A 7"X9" (178mm X 229mm) PEEL & STICK PRE-CUT INSIDE/OUTSIDE CORNER OR A 6"X6" (152mm X 152mm) PEEL & STICK UNCURED EPDM FLASHING PIECE COVERED WITH A 12"X12" TOP LAYER (305mm X 305mm) OF PEEL & STICK UNCURED EPDM FLASHING. BOTH LAYERS SHALL BE CENTERED AND SEALED WITH CONTINUOUS LAP SEALANT.

2. EPDM PRIMER MUST BE APPLIED TO ALL SPLICE AREAS AND FOR EACH LAYER OF PEEL & STICK FLASHING.
1. Clean the dry splice area of the EPDM membrane by scrubbing with EPDM primer.

2. Prior to placement of WeatherBond corner, peel off the blue poly release film and heat the flashing side with a heat gun. Re-apply the poly loosely. Fold the flashing in half.

3. Place WeatherBond inside/outside corner as shown and remove release paper. Press folded flashing tightly into angle change and firmly press flashing against the vertical surface.

4. Place folded flashing tightly into angle change and firmly press flashing onto the deck flange by pressing the flashing against the horizontal surface.

Notes:
1. For projects using 90-mil membrane, refer to Detail WBRC-15.8 for required flashing enhancements.
CAUTION

FOR PROJECTS USING 90-MIL MEMBRANE, REFER TO DETAIL WBRC-15.8 FOR REQUIRED FLASHING ENHANCEMENTS.

WEATHERBOND FASTENER & SEAM FASTENING PLATE, MAX. 12” (305mm) O.C.

9”X9” (229mm X 229mm) MIN. PEEL & STICK UNCURED EPDM FLASHING

NOTES:

1. APPLY EPDM PRIMER TO THE MEMBRANE SURFACES PRIOR TO INSTALLING PEEL & STICK FLASHING.

2. PEEL & STICK UNCURED EPDM FLASHING TO OVERLAP DECK MEMBRANE 3” (76mm) MINIMUM AND EXTEND 2” (51mm) MINIMUM AROUND CORNERS.

3. IN COLDER TEMPERATURES, A HEAT GUN MUST BE USED WHEN FORMING PEEL & STICK UNCURED EPDM FLASHING.
1. Fasten membrane and flash curb or wall with cured EPDM membrane following standard procedures using bonding adhesive and P&S seam tape.

2. Cut a 9" x 9" (229mm x 229mm) section of peel & stick uncured EPDM flashing and make rounded corners as shown.

3. Firmly press.

4. After applying EPDM primer, remove and replace poly backing. Fold 9" x 9" (229mm x 229mm) flashing in half with rounded portion turned up. Center flashing on corner and firmly press against vertical surface.

5. Roll and crease flashing tightly into angle change and firmly roll flashing onto the deck membrane.

NOTES:

1. For projects using 90-mil membrane, refer to DETAIL WBRC-15.8 for required flashing enhancements.
1. FASTEN MEMBRANE AND FLASH CURB OR WALL WITH CURED EPDM MEMBRANE FOLLOWING STANDARD PROCEDURES USING BONDING ADHESIVE AND P&S SEAM TAPE AT MEMBRANE SPlice.

2. CUT A 4-1/2"x6" AND 9"x12" SECTION OF PEEL & STICK UNCURED EPDM FLASHING AND ROUND CORNERS AS SHOWN.

3. CLEAN THE DRY SPlice AREA OF THE EPDM WITH EPDM PRIMER; APPLY LAP SEALANT 2" (51mm) MIN. FROM THE CURB AS SHOWN.

4. AFTER APPLYING LAP SEALANT, REMOVE & REPLACE POLY BACKING ON FLASHING. FOLD 6"x6" FLASHING IN HALF WITH ROUNDED PORTION TURNED UP. CENTER ON CORNER & FIRMLY PRESS AGAINST VERTICAL SURFACE.

5. ROLL & CREASE FLASHING TIGHTLY INTO ANGLE CHANGE & FIRMLY ROLL FLASHING ONTO THE DECK MEMBRANE.

6. AFTER ADHERING, ROLL WITH A TWO INCH WIDE STEEL HAND ROLLER. PAY PARTICULAR ATTENTION TO THE STEP OFFS AND ANGLE CHANGES.

7. CLEAN THE SPlice AREA WITH EPDM PRIMER. INSTALL THE 9"x12" SECTION OF PEEL & STICK UNCURED EPDM FLASHING TO EXTEND A MINIMUM 2" BEYOND THE PREVIOUSLY APPLIED 4-1/2" X 6" FLASHING (STEPS 4-6).

8. OVERLAY THE CORNER WITH 2 PIECES OF 9"x12" PEEL & STICK UNCURED EPDM FLASHING AS SHOWN.

9. SEAL ALL EDGES WITH LAP SEALANT AS SHOWN.
NOTES:

1. THE MAXIMUM ALLOWABLE SURFACE TEMPERATURE OF THE PENETRATION SHALL NOT EXCEED 180°F (82°C).

2. ALL DEBRIS (PAINT, RUST, LEAD, OTHER FLASHINGS, ETC.) MUST BE REMOVED FROM THE PENETRATION.

3. PENETRATIONS, MEMBRANE, FLASHING AND METAL (INSIDE POCKET) MUST BE PRIMED WITH EPDM PRIMER PRIOR TO APPLYING POURABLE SEALER.

4. POURABLE SEALER MUST COMPLETELY FILL POURABLE SEALER POCKET TO PREVENT PONDING OF WATER.

5. POURABLE SEALER MUST CONTACT PRIMED PEEL & STICK UNCURED EPDM FLASHING AND DECK MEMBRANE.

6. SECUREMENT IS REQUIRED FOR POURABLE SEALER POCKETS WHICH ARE GREATER THAN 18” (457mm) IN DIAMETER. REFER TO SPECIFICATIONS.

7. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, ADDITIONAL MEMBRANE SECUREMENT IS REQUIRED (SIMILAR TO DETAIL WBRMA-8.1) REGARDLESS OF SIZE OR DIAMETER.

8. PIPE CLUSTERS MUST HAVE MINIMUM 1” (25mm) CLEARANCE BETWEEN PENETRATIONS.
NOTES:

1. THE MAXIMUM ALLOWABLE SURFACE TEMPERATURE OF THE PENETRATION SHALL NOT EXCEED 180° F (82° C).

2. ALL DEBRIS (PAINT, RUST, LEAD, OTHER FLASHINGS, ETC.) MUST BE REMOVED FROM THE PENETRATION.

3. PENETRATIONS, MEMBRANE, FLASHING AND METAL (INSIDE POCKET) MUST BE PRIMED WITH EPDM PRIMER PRIOR TO APPLYING POURABLE SEALER.

4. POURABLE SEALER MUST COMPLETELY FILL POURABLE SEALER POCKET TO PREVENT PONDING OF WATER.

5. POURABLE SEALER MUST CONTACT PRIMED PEEL & STICK UNCURED EPDM FLASHING AND DECK MEMBRANE.

6. SECUREMENT IS REQUIRED FOR POURABLE SEALER POCKETS WHICH ARE GREATER THAN 18” (457mm) IN DIAMETER. REFER TO SPECIFICATIONS.

7. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, ADDITIONAL MEMBRANE SECUREMENT IS REQUIRED (SIMILAR TO DETAIL WBRMA-8.1) REGARDLESS OF SIZE AND DIAMETER, UNLESS WOOD NAILERS ARE PRESENT.

8. DECK FLANGE MUST BE CONTINUOUS WITH ROUNDED CORNERS.

9. WHEN ANY ONE SIDE OF THE FIELD FABRICATED POURABLE SEALER POCKET EXCEEDS 12” (305mm), USE WOOD BLOCKING TO ANCHOR SHEET METAL.

10. PIPE CLUSTERS MUST HAVE MINIMUM 1” (25mm) CLEARANCE BETWEEN PENETRATIONS.

NOTES:

1. THE MAXIMUM ALLOWABLE SURFACE TEMPERATURE OF THE PENETRATION SHALL NOT EXCEED 180° F (82° C).

2. ALL DEBRIS (PAINT, RUST, LEAD, OTHER FLASHINGS, ETC.) MUST BE REMOVED FROM THE PENETRATION.

3. PENETRATIONS, MEMBRANE, FLASHING AND METAL (INSIDE POCKET) MUST BE PRIMED WITH EPDM PRIMER PRIOR TO APPLYING POURABLE SEALER.

4. POURABLE SEALER MUST COMPLETELY FILL POURABLE SEALER POCKET TO PREVENT PONDING OF WATER.

5. POURABLE SEALER MUST CONTACT PRIMED PEEL & STICK UNCURED EPDM FLASHING AND DECK MEMBRANE.

6. SHAPE METAL DAM TO FIT EXISTING PITCH POCKET.

7. SECUREMENT IS REQUIRED FOR POURABLE SEALER POCKETS WHICH ARE GREATER THAN 18" (457mm) IN DIAMETER. REFER TO SPECIFICATIONS.

8. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, ADDITIONAL MEMBRANE SECUREMENT IS REQUIRED (SIMILAR TO DETAIL WBRMA-8.1) REGARDLESS OF SIZE OR DIAMETER.

9. PIPE CLUSTERS MUST HAVE MINIMUM 1" (25mm) CLEARANCE BETWEEN PENETRATIONS.
NOTES:

1. WOOD NAILERS ARE INSTALLED ONLY AT SCUPPERS TO SECURE METAL SLEEVE AND MUST EXTEND PAST THE WIDTH OF METAL SLEEVE FLANGE.

2. INSTALL WALL FLASHING PRIOR TO SCUPPER INSTALLATION.

3. METAL SCUPPER BOX MUST HAVE CONTINUOUS FLANGES WITH ROUNDED CORNERS. SOLDER ALL SCUPPER SEAMS WATER-TIGHT.

4. WATER CUT-OFF MASTIC UNDER SCUPPER FLANGE MUST BE UNDER CONSTANT COMPRESSION.

5. SCUPPER FLANGES MUST BE TOTALLY COVERED BY PEEL & STICK COVER STRIP WITH MINIMUM 2" (51mm) COVERAGE PAST NAIL HEADS.

6. TO REMOVE FINISHING OILS, SCRUB METAL FLANGE WITH WEATHERED MEMBRANE CLEANER; ALLOW TO DRY PRIOR TO APPLYING EPDM PRIMER.

7. APPLY EPDM PRIMER TO METAL FLANGE AND MEMBRANE SURFACE PRIOR TO INSTALLING PEEL & STICK FLASHING.
NOTE:

1. DETAIL MAY BE USED FOR ANY FASTENER PENETRATION (E.G., ACCESS LADDER, ANCHOR SUPPORT TO PARAPET).

2. WATER CUT-OFF MASTIC MUST BE UNDER CONSTANT COMPRESSION.
NOTES:

1. CLEAN EXPOSED MEMBRANE WITH WEATHERED MEMBRANE CLEANER AND ALLOW TO DRY.

2. PRIOR TO THE APPLICATION OF POURABLE SEALER, APPLY EPDM PRIMER TO THE MEMBRANE AND LIGHTNING ROD BASE ACHIEVING A VERY THIN EVEN COAT ON BOTH SURFACES. ALLOW PRIMER TO DRY UNTIL IT IS TACK FREE.
NOTES:

1. CLEAN EXPOSED MEMBRANE WITH WEATHERBOND WEATHERED MEMBRANE CLEANER AND ALLOW TO DRY.

2. APPLY EPDM PRIMER TO THE MEMBRANE AND LIGHTNING ROD BASE ACHIEVING A VERY THIN, EVEN COAT ON BOTH SURFACES. ALLOW PRIMER TO DRY UNTIL IT IS TACK FREE.

3. INSTALL A SECTION OF P&S SEAM TAPE (APPROXIMATELY THE SIZE OF THE METAL BASE) TO THE MEMBRANE SURFACE. LEAVE THE RELEASE FILM IN PLACE AND ROLL THE TAPE FROM THE CENTER TO THE OUTER EDGES.

4. REMOVE RELEASE FILM AND CAREFULLY PLACE METAL BASE OVER SPLICE TAPE.

5. APPLY EPDM PRIMER TO THE EPDM MEMBRANE WHERE LAP SEALANT IS TO BE APPLIED TO ACHIEVE A THIN, EVEN COAT. ALLOW TO DRY UNTIL TACK FREE. SEAL ALL EDGES AND ANY EXPOSED AREAS OF TAPE (AT PERFORATED BASE) WITH LAP SEALANT.
NOTES:

1. DETAIL FOR WEATHERBOND RBR BLACK OR WHITE ADHERED AND WEATHERBOND MECHANICALLY-ATTACHED ROOFING SYSTEMS WHEN SLOPE AT VALLEY EXCEEDS 2" (51mm) IN ONE HORIZONTAL FOOT.

2. ON MECHANICALLY-ATTACHED ROOFING SYSTEMS, HPWX FASTENERS AND POLYMER SEAM FASTENING PLATES ARE REQUIRED OVER STEEL DECKS.

3. EPDM PRIMER MUST BE APPLIED TO BACK SIDE OF DECK MEMBRANE PRIOR TO COMPLETING SPLICE TO PEEL & STICK RPS.
SLEEPER MUST BE LARGE ENOUGH TO SUPPORT WEIGHT OF EQUIPMENT WITHOUT INDENTING INSULATION. EXTEND WOOD NAILER OUT AS REQUIRED BY STRUCTURAL ENGINEER TO DISTRIBUTE SUBJECT LOAD OR AT LEAST EXTEND OUT MIN. 3” (76mm).

2. ENSURE SCREW/ANCHOR HEADS IN TOP SURFACE OF WOOD BLOCKING ARE RECESSED TO PROTECT MEMBRANE.

3. WOOD NAILERS NOT REQUIRED UNDER PIPE SUPPORTS.

4. CONSULT STRUCTURAL ENGINEER AND/OR SPECIFIER TO AVOID WATER PONDING DUE TO DECK DEFORMATION.
