

## Bookly & ULedger Enter Licensing Agreement

Friday, March 3, 2017

### FOR IMMEDIATE RELEASE:

**Boise, Idaho** - ULedger, Inc. is proud to announce that it has entered into a licensing agreement with Bookly, based in Silicon Slopes - Salt Lake City, Utah. Under terms of the agreement, Bookly will license ULedger's proprietary Blockchain (ULedger Data Integrity) and related technologies.

Zach Olson, CEO of Bookly states: "Blockchain is a transformative technology and through our relationship with ULedger we are excited to be the first company to bring Blockchain to the accounting software industry."

Josh McIver, CEO of ULedger adds: "We are very pleased to announce this strategic licensing relationship which will greatly benefit both ULedger and Bookly, and most importantly, the transparency, integrity and trust of Bookly's client information. Information and records stored on Blockchain data structures is becoming the standard by which all information will eventually be stored eliminating the inefficiencies, lack of integrity and trust and the single point of failure of traditional data bases structures."

### About Bookly:

Bookly is headquartered in Salt Lake City, Utah. Bookly is an online bookkeeping service designed for small business owners. We pair you with a dedicated bookkeeper and our software so we can handle your books for you. Securely send your data to your bookkeeping team automatically by connecting your bank accounts, credit cards and third party integrations to the Bookly app. Moving forward, your dedicated Bookly accountant will ensure your financials are up to date, payroll is delivered, and taxes are filed; allowing you to do more of what you love.

### About ULedger:

ULedger is headquartered in Boise, Idaho with offices in Chicago and Prishtina, Kosovo. ULedger is a Data Integrity as a Service company and serves as "Your Digital Witness" by bringing trust, transparency and integrity to digital records and electronic communications. ULedger's stateless Blockchain protocol affords its clients with an immutable 3<sup>rd</sup> party audit trail of all electronic data, activity, state changes and identity which are critical with the cyber security threats that enterprises face each and every day.
