

**DEANE.**

**SEEN & SAFE**

# HIGH VISIBILITY WORKWEAR

# TOUGHNESS. FUNCTIONALITY. LONGEVITY.

Established in 1932 the Deane brand has built its reputation on these attributes. This expertise has earned Deane iconic status in the workwear category. Any garment carrying the Deane brand has been designed and manufactured specifically for work. All Deane garments are manufactured using rigorous construction techniques from fabrics and components that are guaranteed to perform in your workplace.

Welcome to Deane.

DEANE INNOVATION  
NEW RELEASE

# FLEX

## HIGH MOBILITY OVERALLS

DESIGNED TO SUPPORT MAXIMUM  
MOVEMENT IN ANY POSITION.

Our inspiration is the sports industry where clothing must enhance the wearer's experience while working. This unique overall eliminates discomfort when the arm is fully extended, making previously awkward positions easy.

All Seen and Safe overalls will transition into the Flex style by mid-2017.

MOVEMENTS IMPROVED WITH FLEX:

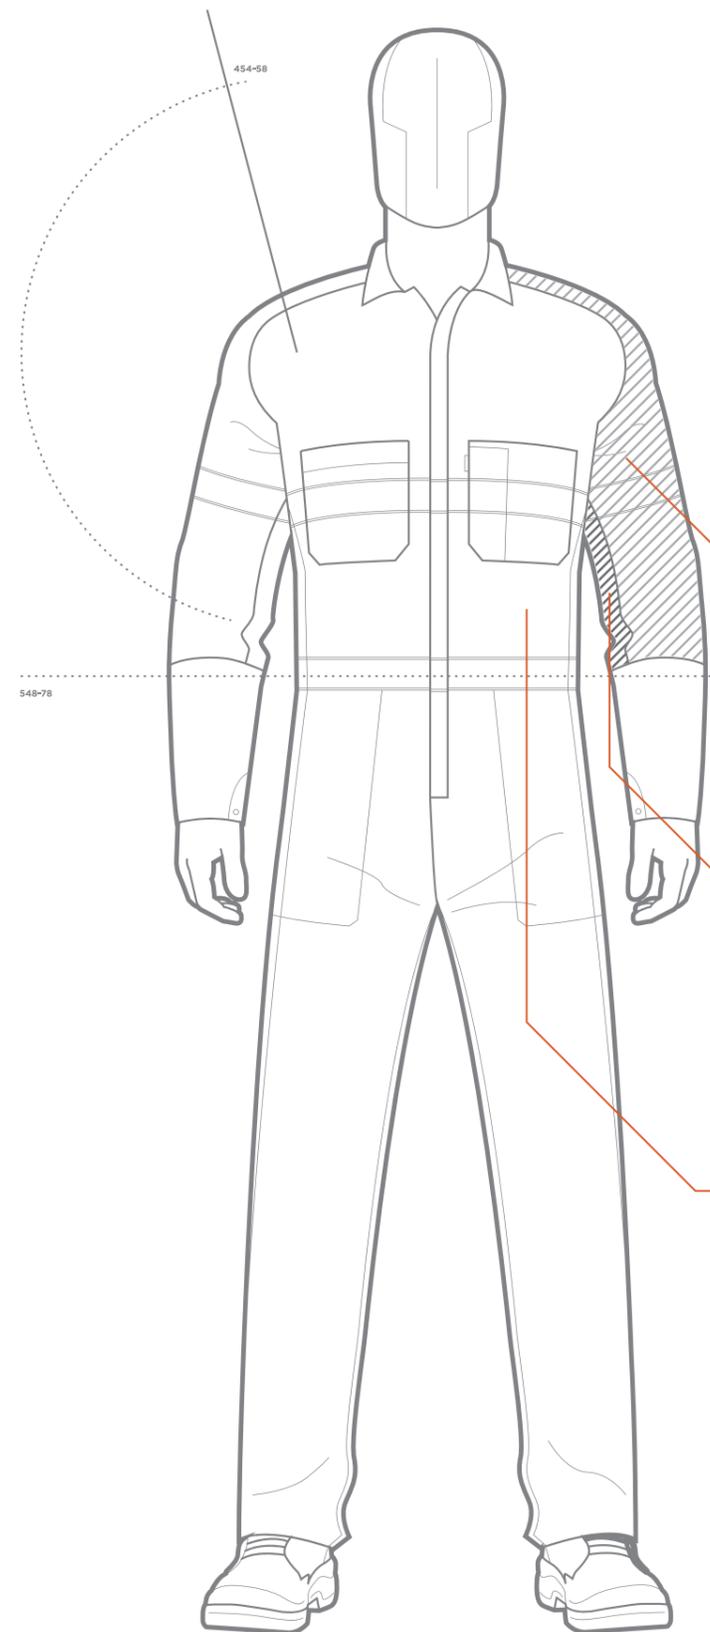

Lifting

Twisting

Extending

### UNIQUE SHOULDER DESIGN

#### ERGONOMICALLY DESIGNED SHOULDER PANEL

The curved shoulder seam increases available movement by following the natural curve of the body.

#### UNIQUE UNDERARM PANEL EXTENDS ARM RANGE

The underarm panel allows full extension of the arm while eliminating garment pull through the body.

#### ENHANCED COOLING

Torso panels are designed to encourage more air flow around the body.

06.

# DAY HIGH VIS

The dyestuffs used for Day High Vis fabric include fluorescence, a property that absorbs the non visible UV light and reflects this back as added brightness, readily picked up by the eye in low visibility conditions.

It is effective in any situation where the light contains UV radiation. This fluorescent colour is not effective in artificial light with little UV radiation.

COMPLIES WITH:  
AS/NZ 4602.1.2011 and AS/NZ 1906.4.2010

FLEX | Day Compliant

# ZIP OVERALL

310 GSM | 100% COTTON

- Deane's famous industrial laundry standard fabric
- New Flex shoulder design to maximise mobility
- Underarm gusset to enhance airflow and reduce torso pull
- Dark collar and cuffs for high stain areas
- YKK non-conductive vislon zip
- UHF chip concealed in collar
- Concealed front placket
- Elasticated back
- 6 pockets - including two chest pockets (right - with flap closure, left - with pen pocket), two hip pockets, one back pocket and a cell phone pocket
- Side vents for easy access to base garments
- Bar tacked stress points
- Replaces style: SNS.OAL002

**ROUGHALLS ARE NON COMPLIANT.** Roughalls are part of a two-tone range, but cannot qualify as certified compliant to the standard due to the reduced amount of Hi Visibility fabric used in the garments. Worn with a compliant shirt or top, the wearer would achieve the protection required by the standard.

# WHAT IS POLYCOTTON?

SHRINK RESISTANT

COLOUR RETENTION

MOISTURE WICKING

LIGHT REFLECTION

Polycotton is a blend of 65% polyester and 35% cotton bringing together the best attributes of each of these yarns. Polyester offers dimensional stability - resistance to shrinkage - and excellent colour retention. The cotton wicks moisture from the body offering evaporative cooling to the wearer. Polycotton retains the reflective properties of the Hi Vis colours far longer than cotton, so the wearer maintains maximum visibility when most needed.

## DAY COMPLIANT ZIP OVERALL

# CoPTTM

Working near fast moving traffic requires maximum visibility. These garments incorporate a large amount of Day High Visibility fabric to maximise visibility. Retro reflective tape is incorporated to cover those times of day when light may be poor, as in periods of dawn, dusk and night conditions, providing the wearer with maximum visibility when lit by headlights of fast moving traffic. It is effective in any situation where the light contains UV radiation. This fluorescent colour is not effective in artificial light with little UV radiation.

COMPLIES WITH: Code of Practice for  
Temporary Traffic Management (CoPTTM): 2013

CoPTTM Compliant

## RETRO REFLECTIVE TAPE

### TECHNOLOGY

A layer of embedded glass beads reflects light back in the same direction from which it came. This technology is effective in dark situations under illumination from headlights or other incandescent light sources.

#### TAPE LAYERS:

26.

# DAY / NIGHT HIGH VIS

The application of tape in patterns prescribed by the standard is what makes these garments Day/Night High Vis. We use fully launderable, retro reflective tape employing glass bead technology. Glass beads are embedded in sheets of silver to refract (bend) incoming light to reflect it back in the same direction as it originated.

### HEAT STRESS PREVENTION

Heat Stress occurs when the body can no longer regulate its own temperature. Workers exposed to extreme heat or work in hot environments may be at risk of heat stress.

Exposure to extreme heat can result in occupational illnesses or injuries such as heat cramps, heat rashes or heat exhaustion. Heat can also increase the risk of injuries in workers as it may result in sweaty palms, fogged-up safety glasses, and dizziness.

Prevention is critical.

## WORKER COOLING SYSTEM

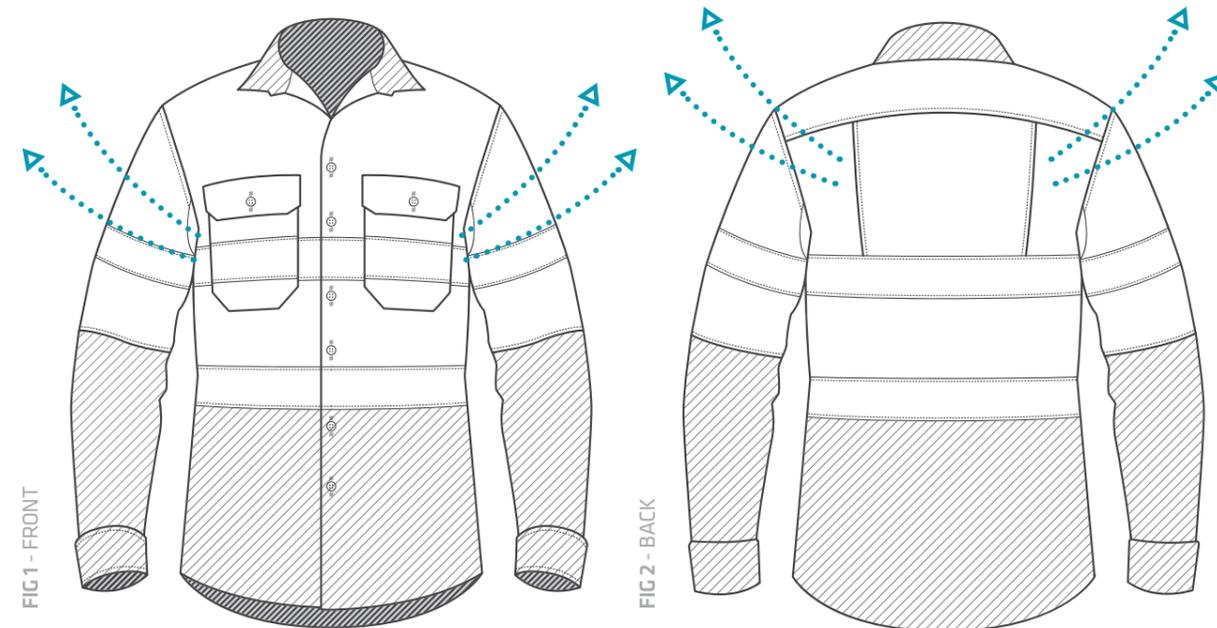

FIG 1 - FRONT

FIG 2 - BACK

### KEY FEATURES

#### ARMPIT MESH VENTS

This is the hardest area to ventilate. The armpit vents allow heat to escape in order to prevent excessive sweat build-up.

#### BACK MESH VENTS

These large mesh vents allow large amounts of upper body heat to escape.

#### LIGHTWEIGHT FABRIC

Fabric that is too thick becomes an insulator. The Worker 155gsm lightweight fabric prevents over-heating in the first place.

DEANE'S  
**ENHANCED  
 FABRIC**

**SANFORISED**

Pre-shrunk using Sanforisation process to prevent shrinkage

**MERCERISED**

Tightened thread bond, improved dye affinity, superior lustre

**RESIN FINISH**

Improves comfort and prevents creasing

Deane garments are engineered for comfort, functionality and aesthetic. This means we put a lot of care and attention into our fabric manufacturing process to ensure all Deane products are great to work in.

## BRANDING / LOGOS

While the 3 standards that control this range, AS/NZS 1906.4:2010, AS/NZS 4602.1:2011 and CoPTTM:2013, are concerned with increasing worker visibility and safety in low light or hazardous conditions, there is an understanding that employers would want logos incorporated onto the garments.

The standards are firm about the size of any interruption to the high visibility portion of the garments and we recommend the logos do not exceed 50 x 100mm to ensure the compliancy of the garment is never compromised.

## HOW TO MEASURE

### NECK

Measure around lowest part of neck

### CHEST

Measure around largest part of the chest with arms at sides

### WAIST

Measure at natural waistline

### HIP

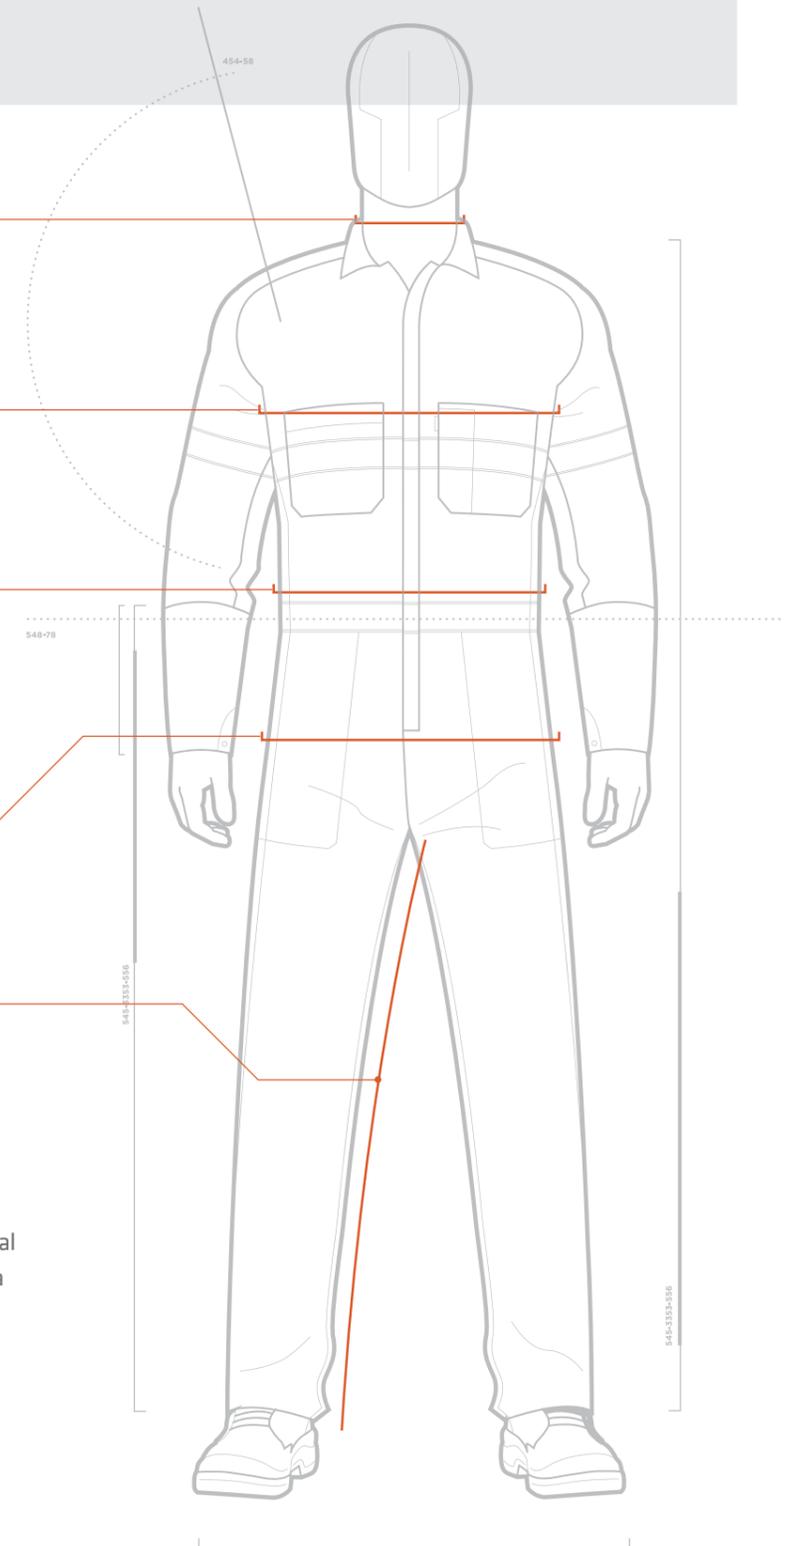

Measure at fullest part while standing upright

### INLEG

Measure from crotch to heel of shoe

The measurements on this chart are actual body measurements and can be used as a guide to garment size selection.

Measure over underwear or light clothing  
Keep the tape straight and level, snug but not tight around the body. Record measurements in centimetres.
